M.Sc. Subsurface Engineering

- Module Descriptions PO 2024
- Curriculum

Modifications:

Module No.	Module Name	Modification
SE-C-5	Soil Behaviour and Simple Constitutive Models	Change in teaching staff
SE-CO-3	Numerical Simulation in Geotechnics and Tunneling	Change in teaching staff
SE-CO-6	Design of Geotechnical Structures – Shallow and Deep Foundations	Change in teaching staff
SE-CO-7	Soil Dynamics and Geotechnical Earthquake Engineering	Change in teaching staff
SE-CO-10	Advanced Constitutive Models for Geomaterials	Changes to Module Coordinator and teaching staff
SE-CO-13	Geothermal Energy Systems and Downstream Technologies	New Module Title
SE-CO-14	Design of Geotechnical Structures – Excavation Pits, Retaining Structures and Soil Improvement	Change in teaching staff
SE-CO-27	Subsurface Energy and Gas Storage	New
SE-O-1	Practical Training on Tunneling and Pipeline Construction Techniques	Changes to the Registration Procedures
SE-O-5	Environmental Geotechnics	Changes to the Examination Formats

Curriculum Subsurface Engineering

Category	Specializ.	Module No.	Module name	Coordinator / Lecturers	CP	Sem.	
Compulsary: 33 CP	Both Specializations (GT + SCU)	SE-C-1	Mathematical Aspects of Differential Equations and Numerical Mathematics	Prof. M. Kronbichler (coordinator)	6	1	WiSe
		SE-C-2	Finite Element Methods in Linear Structural Mechanics	Prof. R. Sauer (coordinator)	6	1	WiSe
		SE-C-3	Fundamentals of Geoscience for Subsurface Engineers a) Physical Geology for non-geologists b) Acquisition, analysis, and interpretation of geophysical measurements	Prof. T. Backers (coordinator) Prof. R. Harrington, Prof. J. Bedford	6 3 3	1	WiSe
		SE-C-4	Groundwater Hydraulics	Dr. T. Heinze (coordinator)	5	1	WiSe
		SE-C-5	Soil Behaviour and Simple Constitutive Models a) Soil Mechanics b) Soil Behaviour under Monotonic, Cyclic and Dynamic Loading c) Simple Constitutive Models for Soils	Dr. M. Salimi Prof. T. Wichtmann (coordinator) Prof. M. Tafili	6 3 1.5 1.5	1	WiSe
		SE-C-6	Project Work	Professors, lecturers and assistants	4	3	WiSe
Compulsary Optional: 42 CP	Geotechnics and Tunneling (GT)	SE-CO-1	Foundation Engineering and Utility Pipe Construction: Design-Engin.-Techn. a) Design, engineering and technologies in Foundation Engineering b) Design, engineering and technologies in Utility Pipe Construction	Prof. M. Thewes (coordinator) Dr. B. Schößer	6 3 3	3	WiSe
		SE-CO-2	Conventional and Mechanised Tunneling: Design-Engineering-Technologies a) Design, engineering and technologies in Tunneling b) Design, engineering and technologies in Pipeline Construction	Prof. M. Thewes (coordinator) Dr. B. Schößer	6 3 3	2	SuSe
		SE-CO-3	Numerical Simulation in Geotechnics and Tunneling	Prof. T. Wichtmann (coord.), Dr. M. Salimi	6	2	SuSe
		SE-CO-4	Concrete Technology and Structural Durability	Prof. I. Curosu (coordinator)	6	3	WiSe
		SE-CO-5	Operation and Maintenance of Tunnels and Utility Pipes a) Facility management of underground transportation infrastructure b) Pipeline maintenance and network management	Prof. M. Thewes (coordinator) Prof. R. Leuker Prof. B. Bosseler	6 3 3	3	WiSe
		SE-CO-6	Design of Geotechnical Structures - Shallow and Deep Foundations	Prof. T. Wichtmann (coordinator)	6	2	SuSe
		SE-CO-7	Soil Dynamics and Geotechnical Earthquake Engineering a) Soil Dynamics b) Geotechnical Earthquake Engineering	Prof. T. Wichtmann (coordinator) Dr. M. Goudarzy Dr. F. Prada	6 3 3	3	WiSe
		SE-CO-14	Design of Geotechnical Structures - Excavation Pits, Retaining Structures and Soil Improvement	Prof. T. Wichtmann (coordinator)	6	3	WiSe
	Both Specializations (GT + SCU)	SE-CO-8	Numerical Methods and Stochastics	Prof. M. Kronbichler (coordinator)	6	2	SuSe
		SE-CO-10	Advanced Constitutive Models for Geomaterials	Prof. M. Tafili (coordinator)	6	2	SuSe
		SE-CO-19	Mechanical Modeling of Materials	Prof. D. Balzani (coordinator)	6	1,3	WiSe
		SE-CO-20	Inelastic Finite Element Methods for Structures	Prof. R. Sauer (coord.), Dr. V. Gudzulic	6	3	WiSe
		SE-CO-22	Geothermal Drilling Engineering and Subsurface Technologies	Prof. R. Bracke (coordinator)	5	3	WiSe
		SE-CO-23	Nonlinear Finite Element Methods for Structures	Prof. R. Sauer (coordinator)	6	2	SuSe
	Subsurface Characterization and Utilization (SCU)	SE-CO-24	Rock Mass Mechanics and Rock Engineering	Prof. T. Backers (coord.), Dr. M. Duda	6	2	SuSe
		SE-CO-12	Applied Geophysics a) Reservoir Geophysics b) Rock Physics	Prof. J. Renner (coordinator)	10 5 5	2	SuSe
		SE-CO-13	Geothermal Energy Systems and Downstream Technologies	Prof. R. Bracke (coordinator)	5	2	SuSe
		SE-CO-15	Hydrogeological Methods a) Analysis of Measurement Results b) Hydrogeological Field Exercises	Dr. T. Heinze (coordinator)	6	2	SuSe
		SE-CO-16	Seismotectonics and Seismic Hazard	Prof. R. Harrington (coord.), Dr. D. Essing	6	3	WiSe
		SE-CO-17	Selected Topics in Reservoir Characterization a) Deep geothermal energy b) Well logging	Prof. J. Renner (coordinator) Prof. T. Reinsch	9 5 4	2 3	both SuSe WiSe
		SE-CO-18	Reservoir Engineering	Prof. E.H. Saenger (coordinator)	5	3	WiSe
		SE-CO-25	Rock Mass Stress Fields a) Stress Field and Rock Mass Behaviour b) Stress Field Modelling and Simulation	Prof. T. Backers (coordinator)	5	3	WiSe
		SE-CO-26	Ground Exploration Methods a) Optimization methods for geophysics b) Gravity and magnetics/Potential fields	Prof. J. Bedford (coordinator) Dr. K. Fischer	11 6 5	2	SuSe
		SE-CO-27	Subsurface Energy and Gas Storage	Prof. R. Bracke (coordinator), Dr. K. Alms	5	2	SuSe
Optional: 15 CP	Both Specializations (GT + SCU)	SE-O-1	Practical Training on Tunneling and Pipeline Construction Techniques	Prof. M. Thewes (coordinator)	2	2	SuSe
		SE-O-2	Aspects of Design and Construction of Tunnels and other Subsurface Infrastructure in Practice	Prof. M. Thewes (coordinator)	2	3	WiSe
		SE-O-3	Technologies in Mechanised Tunneling	Prof. M. Thewes (coordinator) Dr. G. Wehrmeyer	2	2	SuSe
		SE-O-4	Practical Soil Mechanics	Prof. T. Wichtmann (coord.), Dr. W. Baille	3	3	WiSe
		SE-O-5	Environmental Geotechnics	Prof. T. Wichtmann (coordinator) Dr. W. Baille, Dr. D. König	3	2	SuSe
		SE-O-6	Variational Calculus and Tensor Analysis	Prof. J. Waimann (coord.), Dr. U. Hoppe	5	3	WiSe
		SE-O-7	Digital Rock Physics	Prof. E.H. Saenger (coordinator)	5	2	SuSe
		SE-O-10	Scientific Programming	Prof. A. Vogel (coordinator)	6	3	WiSe
		SE-O-16	Introduction to advanced numerical methods for particulate media	Prof. T. Wichtmann (coord.), Dr. M. Salimi	3	3	WiSe
		SE-O-17	Uncertainty Quantification in FE Analyses with Surrogate Modeling	Prof. R. Sauer (coordinator) Dr. B.T. Cao, Dr. G. Neu	6	3	WiSe
		SE-O-18	Problematic Soils	Prof. T. Wichtmann (coord.), Dr. W. Baille	3	3	WiSe
		SE-O-19	Computational Structural Optimization	Prof. R. Sauer (coord.), Prof. A. Saxena	6	3	WiSe
		SE-O-21	Selected Topics of Geotechnical and Geoenvironmental Engineering	Prof. T. Wichtmann (coord.), Dr. D. König	2	2,3	both
		SE-O-22	Deep Learning for Engineers	Prof. A. Vogel (coordinator)	6	2	SuSe
		SE-O-23	German A1	J. Salzinger	5	1,3	WiSe
		SE-O-24	German A2	J. Salzinger	5	2	SoSe
		SE-O-14	Training of Competences (part 1)		4	1,2,3,4	both
		SE-O-15	Training of Competences (part 2)		4	1,2,3,4	both
Master Thesis: 30 CP		SE-MT	Master Thesis	Professors, lecturers and assistants	30	4	SuSe

Courses from completed previous master programs cannot be acknowledged for the SSE program.

Advanced Constitutive Models for Geomaterials					
Advanced Constitutive Models for Geomaterials					
Module number BI-WP44 /SE-CO-10/CE-W06	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Advanced Constitutive Models for Geomaterials (128055)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr.-Ing. Merita Tafili a) Prof. Dr.-Ing. Merita Tafili					
Admission requirements					
Learning outcome, core skills After successfully completing the module, the students are able to • model the material behavior of soil using suitable, advanced constitutive models, • select suitable numerical methods and constitutive models for practical questions and assess limitations according to the selected approaches, • calibrate the parameters of the advanced constitutive models and evaluate the model performance based on single integration point simulations					
Contents a) The course deals with the introduction of advanced soil mechanical behavior and appropriate constitutive models allowing to capture advanced effects. Model formulations and parameter calibration for different soil model families are taught. In addition, an introduction to single integration point finite element simulations with Incremental Driver (ID) is provided and simulations of different laboratory tests are conducted with ID using different elasto-plastic and hypoplastic constitutive models. Advanced soil mechanics: • Critical state soil mechanics • Crushable soil mechanics • Unsaturated soil mechanics • Soil memory effects and their modelling • Clay structure and small-strain stiffness anisotropy • Influence of temperature on soil behavior and its modelling Sophisticated constitutive models for soils: • Modified Cam-Clay model • Sanisand • Hypoplasticity with Intergranular Strain • Clay Hypoplasticity • Hypoplasticity for crushable soils • Visco-hypoplasticity					

• Barcelona Basic Model
Educational form / Language a) Lecture (4 WLH) / English
Examination methods • Written exam 'Advanced Constitutive Models for Geomaterials' (180 min., Part of modul grade 100 %) • Optional homework to achieve bonus points for the written exam
Requirements for the award of credit points • Passed final written exam
Module applicability • M.Sc. Civil Engineering • M.Sc. Subsurface Engineering • M.Sc. Computational Engineering
Weight of the mark for the final score Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.
Further Information

Applied Geophysics Applied Geophysics					
Module number SE-CO-12	Credits 10 CP	Workload 300 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Reservoir Geophysics (177021) b) Rock Physics (177053)			Contact hours a) 3 WLH (45 h) b) 3 WLH (45 h)	Self-study a) 120 h b) 90 h	Frequency a) each summer b) each summer
Module coordinator and lecturer(s) Prof. Dr. Jörg Renner a) Prof. Dr. Jörg Renner b) Prof. Dr. Jörg Renner					
Admission requirements Recommended previous knowledge: Sound mathematical skills (vector calculus, differential- and integral calculus)					
Learning outcome, core skills After successful completion of the module students • appreciate the scale-dependent approach to the physical characterization of rocks (micro-to decimeter-scale) and reservoirs (deci- to kilometer-scale) • understand the relation between physical properties of rocks and their chemical composition and microstructure • learned the use and limits of empirical and theoretical concepts for the description of heterogeneous media • know the practical aspects of a suite of methods in exploration geophysics • are familiar with the mathematical description of physical processes on rock and reservoir scale • understand the origin of the governing partial differential equations and master some approaches to their solution					
Contents a) • Introduction to reservoirs (hydrocarbon, geothermal) • Physical properties of reservoir fluids • Hydraulic transport (Kozeny-Carman relation) and storage (linear poro-elasticity I: isostatic stress states) • Theory and practice of pumping tests (diffusion equation, scaling) • Geothermics (add advection to diffusion) • Aspects of waves in real media (wave equation, linear poro-elasticity II: add deviatoric stresses) b) • Introduction to rocks and minerals • Porosity and interface phenomena • Hydraulic transport in rocks (Darcy's law, permeability models) • Elasticity (stress, strain, Hooke's law, averaging schemes) • Failure of rocks (fracture and friction)					

- Laboratory practical: students independently conduct simple experiments to determine basic physical properties of rocks (density, porosity, permeability, elastic wave velocities, electrical conductivity) and fluids (density, viscosity)

Educational form / Language

- a) Lecture (3 WLH) / English
b) Lecture (3 WLH) / English / German

Examination methods

- Written exam 'Applied Geophysics' (180 min., Part of modul grade 100 %, + report on lab experiments)

Requirements for the award of credit points

Passed module exam

Module applicability

- M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $10 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Aspects of Design and Construction of Tunnels and other Subsurface Infrastructure in Practice

Aspects of Design and Construction of Tunnels and other Subsurface Infrastructure in Practice

Module number	Credits	Workload	Semester[s]	Duration	Group size
SE-O-2	2 CP	60 h	3. Sem.	1 Semester[s]	20
Courses a) Aspects of Design and Construction of Tunnels and other Subsurface Infrastructure in Practice			Contact hours a) 2 WLH (30 h)	Self-study a) 30 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Markus Thewes a) Prof. Dr.-Ing. Markus Thewes					
Admission requirements					
Learning outcome, core skills In this module, practical knowledge about planning, construction and management of current projects in tunneling and subsurface construction practice is offered through selected lectures of guest experts of by participation in on the worldwide largest conferences for tunneling, the STUVA conference. This module is offered every two years (in the uneven years) in cooperation with STUVA e.V.					
Contents a) The module deals with the extended practical knowledge of tunnel design, construction, operation and safety. Typical topics include: • Tunnel construction and tunnel operation • International projects • BIM, monitoring, digitalization • Technical alteration to national and international standards • Combined construction techniques • Mechanized tunneling • Developments in segmental lining (tubbing) • Artificial freezing of ground • Tunneling in swelling soil • Safety in road tunnels • Tunnel planning, tunnel refurbishment • Start of operation and energy saving • Traffic tunnel and geothermic applications in tunneling					
Educational form / Language a) Internship / English					
Examination methods • Internship 'Aspects of Design and Construction of Tunnels and other Subsurface Infrastructure in Practice' (60 h., ungraded, Full time participation)					
Requirements for the award of credit points					

• Full time participation	
Module applicability • M.Sc. Subsurface Engineering • M.Sc. Civil Engineering	
Weight of the mark for the final score Percentage of total grade [%] = 0, ungraded	
Further Information	

Selected Topics of Geotechnical and Geoenvironmental Engineering					
Ausgewählte Kapitel aus Grundbau und Umweltgeotechnik					
Module number BI-W30/SE-O-21	Credits 2 CP	Workload 60 h	Semester[s] 2./3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Selected Topics of Geotechnical and Geoenvironmental Engineering (128223)			Contact hours a) 1 WLH (15 h)	Self-study a) 45 h	Frequency a) each sem.
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Dr.-Ing. D. König					
Admission requirements Recommended previous knowledge: Completed modules in soil mechanics and foundation engineering					
Learning outcome, core skills The students • gain an impression of the complexity of practical construction tasks and learn about solutions to specific problems, • are able to engage with innovative ideas and solution strategies, • can transfer the solutions learned to other situations.					
Contents a) In this course, current construction projects and methods are presented by experts e.g. from construction industry. The tasks, technical constraints, planning and design principles, construction works, difficulties encountered, and solutions are explained.					
Educational form / Language a) Lecture (1 WLH) / German					
Examination methods • Oral exam 'Selected Topics of Geotechnical and Geoenvironmental Engineering' (0 min., ungraded, Colloquium)					
Requirements for the award of credit points • Participation • Passed module examination: oral exam					
Module applicability • M.Sc. Civil Engineering • M.Sc. Subsurface Engineering • M.Sc. Environmental Engineering					
Weight of the mark for the final score Percentage of total grade [%] = 0, ungraded					
Further Information					

Perhaps excursion/conference participation

Computational Structural Optimization Computational Structural Optimization					
Module number CE-WP35/BI-W74/SE-O-19	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Computational Structural Optimization (127517)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr. Roger A. Sauer a) Prof. Anupam Saxena					
Admission requirements Recommended previous knowledge: Basics knowledge in Mathematics, Programming, FEM and Structural Analysis					
Learning outcome, core skills After successfully completing the module, the students • have advanced knowledge regarding topology optimization and its integration in computational models • are able to independently implement topology optimization code in FE-Analysis frameworks • can perform computational topology optimization and apply it to any engineering problem • can critically interpret the results of a topology optimization					
Contents a) The course covers the basic knowledge of topology optimization and its implementation in computational frameworks. In particular, the following topics are taught in the course: • Introduction in finite-element theory and the development of code to perform FE-Analysis • Theory of topology optimization with code implementation • Application of topology optimization in computational models with different complexity levels					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English					
Examination methods • Project report 'Computational Structural Optimization' (30 h., Part of modul grade 100 %, Project work with coding assignments and a written report (90%), optional presentation, with Oral examination (10%))					
Requirements for the award of credit points					
Module applicability • M.Sc. Computational Engineering • M.Sc. Subsurface Engineering • M.Sc. Civil Engineering					
Weight of the mark for the final score Percentage of total grade [%] = $6 \cdot 100 \cdot \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents.					

DIV: The values can be taken from the table of contents.

Concrete Technology and Structural Durability					
Concrete Technology and Structural Durability					
Module number SE-CO-04	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Fundamentals of cement-based construction materials (125807) b) Durability of reinforced concrete structures (125807) c) Special concretes for tunnelling (125807)			Contact hours a) 2 WLH (30 h) b) 2 WLH (30 h) c) 2 WLH (30 h)	Self-study a) 30 h b) 30 h c) 30 h	Frequency a) each winter b) each winter c) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. habil. Iurie Curosu a) Prof. Dr.-Ing. habil. Iurie Curosu b) Prof. Dr.-Ing. habil. Iurie Curosu c) Prof. Dr.-Ing. habil. Iurie Curosu					
Admission requirements					
Learning outcome, core skills After successfully completing the module, the students • gain basic knowledge of the decisive construction materials in civil engineering, in general, • can judge on the essential deterioration processes in reinforced concrete elements, • are able to define suitable concrete compositions for specific applications.					
Contents a) The course covers the basics of cement-based construction materials. Material properties and testing principles: • chemical and physical basics • strength and deformations Cement-based construction materials • constituents (binder, aggregate, additives) • concrete (basics and material design) • production and processing of concrete • cement hydration and concrete hardening In exercises the students design different concrete compositions on the basis of practical examples. The theoretical exercises are complemented by laboratory sessions on cement, fresh-state concrete properties and mechanical testing of concrete. b) The course covers the physical and chemical environmental effects on concrete structures, focusing on transport processes within the microstructure and corrosion mechanisms. • exposures and transport processes of harmful substances • corrosion processes and preventive measures					

- performance-based service life assessment

In case of damage, inspection methods and testing procedures are introduced, followed by suitable repair measures and material-related requirements.

c)

The course covers special concrete compositions in view of their application in the field of tunnelling.

- special cements and concrete additives
- hydration process, fresh and hardened concrete properties
- hydration heat and strength development

Thereby, the course addresses special types of concrete as sprayed concrete, fibre-reinforced concrete, concrete for tunnel lining and grouting materials for backfilling.

Educational form / Language

a) Lecture (1 WLH) / Tutorial (1 WLH) / English

b) Lecture (1 WLH) / Laboratory / English

c) Lecture (2 WLH) / English

Examination methods

- Written exam 'Concrete Technology and Structural Durability' (120 min., Part of modul grade 100 %)

Requirements for the award of credit points

- Passed final written examination

Module applicability

- M.Sc. Subsurface Engineering
- M.Sc. Civil Engineering
- M.Sc. Environmental Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 \cdot 100 \cdot \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Conventional and Mechanised Tunneling: Design – Engineering – Technologies					
Conventional and Mechanised Tunneling: Design – Engineering – Technologies					
Module number BI-WP11/SE-CO-2	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Design, engineering and technologies in Tunneling and Pipeline Construction (128009)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr.-Ing. Markus Thewes a) Prof. Dr.-Ing. Markus Thewes, Dr.-Ing. Britta Schößler					
Admission requirements Recommended previous knowledge: Bachelor-level knowledge of construction operations and construction process engineering, Bachelor-level knowledge of foundation engineering and soil mechanics					
Learning outcome, core skills The module is intended to familiarize students comprehensively with the whole field of tunneling. The participants will acquire in-depth knowledge for engineering tasks in the areas of planning, construction and operation of tunnels. The students will learn to independently work on tasks from these areas and to develop a specific understanding of the methods. They will be enabled to solve the common problems of tunnel design and construction and to work independently and purposefully. Relations of this area with other areas of civil engineering as an interdisciplinary task are recognized and integrated into the solutions. The students will acquire knowledge that is necessary for the preparation and execution of construction projects of tunnel construction. The methods commonly used in practice shall be applied.					
Contents a) The lecture deals with the extended basic knowledge of Tunnel Engineering. a) Design, engineering and technologies in Tunneling • Planning methods for tunnel constructions • Methods and components of for temporary and final tunnel lining • Conventional Tunneling • Excavation techniques for soil and rock • Conventional tunneling with mechanized excavation of the rock mass • Sprayed concrete method • Compressed air method • Mechanized tunneling, different Tunnel Boring Machines adapted to the boundary conditions on rock and soil formations • Single-shell and double-shell tunnel linings • Special construction methods • Monitoring and process management • Special features of tunneling logistics and ventilation • Safety aspects during construction and operation					

• Settlement prediction for green-field and buildings
b) Design, engineering and technologies for Trenchless Construction Techniques (manned) • Technical principals of manned techniques – steerable • Microtunnelling, • Pipe Jacking • Construction and structural analysis of Jacking Pipes • Jacking Forces, Jacking Force Prediction
Educational form / Language a) Lecture (3 WLH) / Tutorial (1 WLH) / English
Examination methods • Written exam 'Design, engineering and technologies in Tunneling and Pipeline Construction' (120 min., Part of modul grade 100 %, optionally English or German) • Term paper 'Design, engineering and technologies in Tunneling and Pipeline Construction - Homework' (30 h., Part of modul grade 0 %, optionally English or German)
Requirements for the award of credit points • Presentation of the results of the homework assignment • Passed written examination of the module
Module applicability • M.Sc. Civil Engineering • M.Sc. Subsurface Engineering • M.Sc. Geosciences
Weight of the mark for the final score Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.

Design of Geotechnical Structures – Excavation Pits, Retaining Structures and Soil Improvement Design of Geotechnical Structures – Excavation Pits, Retaining Structures and Soil Improvement					
Module number SE-CO-14	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Design of Geotechnical Structures – Excavation Pits, Retaining Structures and Soil Improvement (125818)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Prof. Dr.-Ing. Torsten Wichtmann					
Admission requirements					
Learning outcome, core skills After successfully completing the module, the students are able to - perform the proofs of ultimate limit state and serviceability limit state for different types of retaining structures as well as other components of construction pits in accordance with Eurocode 7, supported by in-situ testing and laboratory experiments, - recommend the appropriate retaining structure according to soil conditions, expected loads and design requirements, - recommend the appropriate method of soil improvement according to soil conditions, expected loads and design requirements					
Contents a) The course: - Introduces possible failure mechanisms of retaining systems, soil slopes as well as excavation pits and soil dikes - Gives a general overview to different type of retaining structures (e.g. flexible and rigid) with active and passive facings - Discusses different calculation methods to determine the safety factor of the slopes, excavation pits and retaining structures against failure - Explains multitude of supporting techniques (e.g. back anchoring, nailing, etc.) with their corresponding design methods - Gives an overview to geosynthetic soil reinforced geostructures - Introduces different methods of soil improvement					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English					
Examination methods - Written exam 'Design of Geotechnical Structures – Excavation Pits, Retaining Structures and Soil Improvement' (180 min., Part of modul grade 100 %) - Homework with GGU application to geotechnical problems, giving bonus points for the exam.					

Requirements for the award of credit points
• Passed final written examination
Module applicability
• M.Sc. Subsurface Engineering
Weight of the mark for the final score
Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.

Digital Rock Physics Digital Rock Physics					
Module number SE-O-7	Credits 5 CP	Workload 150 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size 20
Courses a) Digital Rock Physics			Contact hours a) 3 WLH (45 h)	Self-study a) 105 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr. Erik Saenger a) Prof. Dr. Erik Saenger					
Admission requirements					
Learning outcome, core skills The students will learn the fundamentals of digital rock physics. This broad range of knowledge will be taught with a special emphasis on geothermal and hydrocarbon exploration. After successful completion of this module, the students will: • know the fundamentals of digital rock physics: - e.g. use of high-performance computer systems - e.g. understand the resolution limits of CT devices • be able apply the fundamentals of digital rock physics: - to predict effective material properties - to improve digital images with respect to the real rock • be able to apply the fundamentals of digital rock physics to scientific projects: - to upscale elastic properties to understand field scale observations - to interpret uncertainties in the digital rock physics workflow					
Contents a) • The basics of the digital rock physics workflow will be introduced: CT-imaging, reconstruction, segmentation, calculation of physical properties. • The basics of parallel computing on high-performance computer systems will be introduced. • The basics of finite-different-schemes to solve the elastodynamic wave equation will be introduced. • The parallel computer program "Heidimod" to model elastic waves in highly heterogeneous and anisotropic media will be introduced in detail and will be applied to problems in the field of digital rock physics					
Educational form / Language a) Lecture (1 WLH) / Tutorial (2 WLH) / English / German					
Examination methods • Term paper 'Digital Rock Physics' (30 h., Part of modul grade 100 %)					
Requirements for the award of credit points final report on computer exercises					
Module applicability • M.Sc. Subsurface Engineering					

- M.Sc. Geosciences

Weight of the mark for the final score

Percentage of total grade [%] = $5 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Environmental Geotechnics Environmental Geotechnics					
Module number SE-O-5	Credits 3 CP	Workload 90 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Environmental Geotechnics (126701)			Contact hours a) 2 WLH (30 h)	Self-study a) 0 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a)					
Admission requirements Recommended previous knowledge: completed module Soil and rock behaviour (including lecture: Soil behaviour and simple constitutive models for soils).					
Learning outcome, core skills After successfully completing the modules, the students are able to • assess environmental pollutants with regard to their hazard potential and migration behaviour in soil and groundwater, • develop strategies for the demobilization of pollutants and remediation of contaminated sites based on a comprehensive understanding of physical-chemical properties of soils, • identify the design principles of technical barrier systems used for landfills and low contaminated soils.					
Contents a) Interdisciplinary knowledge necessary for the safe disposal of environmentally hazardous substances and the remediation of contaminated soil is presented from the perspective of soil, groundwater and soil-air interactions. Furthermore, technical barriers for the encapsulation of landfills will be addressed. The lecture contents cover the following topics: • Relevant environmental pollutants and their respective industrial sectors • Advective and diffusive transport of pollutants in porous media • Methods for soil remediation and containment of pollutants • Barrier systems for landfills and low contaminated soils • Individual project work dealing with specific questions of environmental geotechnics • Future challenges of environmental geotechnics					
Educational form / Language a) Lecture (2 WLH) / English					
Examination methods • Written exam 'Environmental Geotechnics' (90 min., Part of modul grade 100 %)					
Requirements for the award of credit points • Passed final module examination: written examination					
Module applicability • M.Sc. Subsurface Engineering					

Weight of the mark for the final score
Percentage of total grade [%] = $3 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.

Rock Mass Mechanics and Rock Engineering					
Felsbau					
Module number BI-WP23/SE-CO-24	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Rock Mass Mechanics (177269) b) Rock Engineering (177222) c) Rock Mechanical Lab Training (177251)			Contact hours a) 2 WLH (30 h) b) 2 WLH (30 h) c) 1 WLH (15 h)	Self-study a) 45 h b) 45 h c) 15 h	Frequency a) each summer b) each summer c) each summer
Module coordinator and lecturer(s) Prof. Dr. Tobias Backers a) Dr. Mandy Duda b) Dr. Mandy Duda c) Dr. Mandy Duda					
Admission requirements Recommended previous knowledge: Completed modules in mechanics, soil mechanics and foundation engineering					
Learning outcome, core skills As a field of geomechanics, rock mass mechanics deals with the description of the rheological properties and associated material models of rock and discontinuities; through integration, the deformation behaviour of rock mass (= rock + discontinuities) can be evaluated in response to changes in thermal, hydraulic or mechanical boundary conditions. Understanding the thermos-hydro-mechanical behaviour of rock mass forms the basis for its use as a structural or material resource. Rock engineering deals with structural measures in rock mass. The structural engineering measures include excavation, stabilization, extraction, foundations, and the creation of cavities. Based on the fundamentals of rock mass mechanics, the principles of rock engineering are discussed. Laboratory experiments to describe and classify rock and rock mass will be conducted Participants are familiar with the fundamentals of rheology, the mechanical behaviour of rocks and discontinuities, rock mass classification and mechanical properties of rock mass. They know and understand the typical characteristic properties in terms of their significance and magnitude and how there are derived from laboratory experiments. Furthermore, they deepen their knowledge of geomechanical principles and interrelations. Participants are also familiar with the basics of constructing and securing rock structures considering the properties of rock and discontinuities as a mechanical system.					
Contents a) Deformation und Versagen von Gestein; Einführung in die Versuchstechnik; Deformation und Versagen von Trennflächen; Gebirgsklassifikationen; Deformation und Versagen von Fels; Charakteristika von Tunneln, Stollen und Felskavernen; Prinzipien des Hohlraumbaus; Gründungen auf Fels und Böschungen aus Fels; Aufgabenstellungen und Messgrößen bei der geotechnisch/geomechanischen Überwachung; felsmechanische numerische Simulation b)

Finite Element Methods in Linear Structural Mechanics					
Finite Element Methods in Linear Structural Mechanics					
Module number CE-P05/BI-P08/SE-C-2/ FEM-I	Credits 6 CP	Workload 180 h	Semester[s] 1. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Finite Element Methods in Linear Structural Mechanics (125507/127012)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr. Roger A. Sauer a) Prof. Dr. Roger A. Sauer					
Admission requirements Recommended previous knowledge: Basics in Mathematics, Mechanics and Structural Analysis (Bachelor level)					
Learning outcome, core skills After successfully completing the module, the students • have basic knowledge of the Finite Element Method (FEM), • are able to transfer initial boundary value problems of structural mechanics into discretized calculation models based on FEM and thus to solve simple tasks of structural mechanics independently (e.g. calculation of truss structures, disc-like or volume structures), • have advanced knowledge to understand the functionality of calculation programs based on FEM and to critically evaluate their results, • are able to independently implement corresponding user-defined elements in FE programs and perform numerical analyses of beam and shell structures.					
Contents a) The course covers the basic knowledge of linear FEM, which is based on the principle of virtual work. In particular, the following topics are taught in the course: • Isoparametric finite elements for trusses, two-dimensional elements, beams, three-dimensional volume elements for application in statics and dynamics, • consistent explanation of the fundamentals (basic equations, principle of variation), • Numerical integration, assembly of the elements to a discretized structure and the solution of the static and dynamic structure equation, • Discussion of stiffening effects ("locking") and their avoidance.					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English					
Examination methods					

- Written exam 'Finite Element Methods in Linear Structural Mechanics' (120 min., Part of modul grade 100 %)
- Optional tasks to be solved at home and announced during the course, to get the bonus points for the exam.

Requirements for the award of credit points

- Passed final module examination

Module applicability

- M.Sc. Computational Engineering
- M.Sc. Subsurface Engineering
- M.Sc. Civil Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Foundation Engineering and Utility Pipe Construction: Design – Engineering – Technologies

Foundation Engineering and Utility Pipe Construction: Design – Engineering – Technologies

Module number BI-WP10/SE-CO-1	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Design, engineering and technologies in Foundation Engineering and Utility Pipe Construction			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Markus Thewes a) Prof. Dr.-Ing. Markus Thewes, Dr.-Ing. Britta Schößler					
Admission requirements Recommended previous knowledge: Bachelor-level knowledge of construction operations and construction process engineering, Bachelor-level knowledge of foundation engineering and soil mechanics					
Learning outcome, core skills The module intends to provide students with a comprehensive understanding of the field of design, engineering and technology regarding Foundation Engineering and Utility Pipe construction. They will acquire in-depth knowledge for special areas of foundation engineering for the accomplishment of engineering tasks on areas planning, construction and operation. Foundation engineering is the field of civil engineering, which deals with the design and construction of subsurface structures which typically are built in open excavation pits. The students will learn to work on tasks from these areas and to develop an understanding of the methods. They will be enabled to independently solve the common problems of foundation engineering and utility pipe construction. Connections of this field with other areas of the building industry as interdisciplinary task are recognized and integrated into the solutions of project processing. The students acquire knowledge that is necessary for the preparation and processing of construction projects in construction management. The methods commonly used in practice shall be applied.					
Contents a) The lecture deals with the extended basic knowledge of construction process engineering.					
Design, engineering and technologies in Foundation Engineering • Dewatering / Water management • Construction pit system (Girder System, Diaphragm Wall, Bored Pile Wall, etc.) • Caisson systems • Grout injection techniques (low and high pressure methods, etc.) • Injected piles • Underpinning • Cut and Cover method • Conventional sealing methods (waterproofing) • Construction of jointing					

- Open trench methods in Pipeline Construction

Pipeline Construction (Trenchless Construction Techniques - unmanned)

- Technical principals of unmanned techniques – steerable
- Technical principals of unmanned techniques – non-steerable
- HDD Horizontal Directional Drilling, Direct Pipe

Educational form / Language

a) Lecture (2 WLH) / Tutorial (2 WLH) / English

Examination methods

- Written exam 'Design, engineering and technologies in Foundation Engineering and Utility Pipe Construction' (120 min., Part of modul grade 100 %, optionally English or German)
- Term paper 'Process Technology and Construction Management - Homework' (30 h., Part of modul grade 0 %, optionally English or German)

Requirements for the award of credit points

- Presentation of the results of the homework assignment
- Passed written examination of the module

Module applicability

- M.Sc. Civil Engineering
- M.Sc. Environmental Engineering
- M.Sc. Subsurface Engineering
- M.Sc. Geosciences

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Fundamentals of Geoscience for Subsurface Engineers					
Fundamentals of Geoscience for Subsurface Engineers					
Module number SE-C-3	Credits 6 CP	Workload 180 h	Semester[s] 1. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Physical Geology for non-geologists b) Acquisition, analysis, and interpretation of geophysical measurements			Contact hours a) 2 WLH (30 h) b) 3.33 WLH (49.95 h)	Self-study a) 60 h b) 40 h	Frequency a) each winter b) each winter
Module coordinator and lecturer(s) Prof. Dr. Tobias Backers a) Prof. Dr. Tobias Backers b) Dr. Marco Roth, Prof. Dr. Rebecca Harrington, Prof. Dr. Jonathan Bedford, Dr. Kaspar Fischer					
Admission requirements					
Learning outcome, core skills After successful completion of the course the students will • have a thorough understanding of the System Earth and its complexities, and understand the societal and engineering relevance of geological processes and materials • be able to assess and solve practical and scientific engineering challenges against this background • have gained experience in taking geophysical measurements for a variety of commonly used methods, • understand the physics of the data acquisition and processing in addition to the related geological concepts.					
Contents a) This course consists of two components (i) basics: self study of course material and (ii) application and discussion: two days field camp. It covers topics in geology that are relevant to civil engineering: • Formation of rocks, geological features (e.g., stratification, faults, joints, folds), plate tectonics, and geological formations • Weathering, erosion and mass wasting and the influence of climate • Basic concepts of hydrogeology and engineering geology. • The human impact on Earth's environment b) This course consists of three consecutive parts. 1. Acquisition: Students work together in small groups to conduct geophysical field surveys on (or close to) RUB campus. Measurement techniques will include refraction seismics, geomagnetics, ground penetrating radar, and resistivity. 2. Analysis: Students work under classroom instruction and self-study to process the data from the acquisitions. 3. Interpretation: Students produce a report containing a background description of the methods and geological interpretation of the processed measurements.					

Educational form / Language

- a) / German / English
- b) / English

Examination methods

- Test 'Physical Geology for non-geologists' (15 h., Part of modul grade 50 %, self-study (English and German material) and weekly online interrogation)
- Exercises 'Acquisition, analysis, and interpretation of geophysical measurements - Report' (0 h., Part of modul grade 50 %, 4 half-days of fieldwork for acquisition. 20 hours of classroom time for learning data processing approaches and associated geophysical and geological concepts.)

Requirements for the award of credit points

- Pass the online interrogations, compulsory attendance in the field camps
- and achieving passing score on the graded written report.

Module applicability

- M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

b) 2 full days (4 half-days) of fieldwork and 20 hours of classroom time

For the fieldwork, students should ensure that they are dressed appropriately for working outside during Autumn weather. All registered students will receive an email with more details.

Geothermal Drilling Engineering and Subsurface Technologies					
Geothermal Drilling Engineering and Subsurface Technologies					
Module number 139080	Credits 5 CP	Workload 150 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Geothermal Drilling Engineering and Subsurface Technologies			Contact hours a) 4 WLH (60 h)	Self-study a) 90 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr. rer. nat. Rolf Bracke a) Prof. Dr. rer. nat. Rolf Bracke					
Admission requirements Recommended previous knowledge: English language skills: "Test of English as a Foreign Language" (TOEFL): the test result in the internet version (iBT) should be at least 80 points, or "International English Language Testing System" (IELTS): minimum overall score "6" ("academic").					
Learning outcome, core skills The course provides an introduction to the principles of resource geology, deep drilling technologies, reservoir production and subsurface technologies. Students will learn how to evaluate a resource and propose suitable utilization concepts, plan a drilling project including well design, and select tools and equipment for reservoir production and monitoring. The lecture is accompanied by an exercise with practical examples and two excursions Students will be able to: • explain resource geology methods and parameters, • define conceptual reservoir models • tell principles of resource management • compute thermal power outputs, • explain the main methods and parameters of drilling technology • develop drilling and production concepts, • calculate casing designs, • describe potential drilling problems, • define the composition of the cost structure of a drilling project • describe reservoir test principles, • calculate production parameters					
Contents a) • Introduction to subsurface technologies and applications • Geothermal resource characterization: temperature, pressure, and, fluid flow in the geological subsurface + 1 excursion • Geological and mining law act					

• Deep drilling basics (drilling rig, strings, and, bits) + 1 excursion • Drilling techniques and processes (conventional and advanced drilling technologies); • Casing design and calculation; • Drilling fluid/mud system; • Cementation and well control; • Health safety and environment; • Economics and Reporting; • Well integrity and Logging technologies • Monitoring techniques • Reservoir production technologies • Deep geothermal heat exchangers
Educational form / Language a) Lecture (3 WLH) / Tutorial (1 WLH) / English
Examination methods • Written exam 'Geothermal Drilling Engineering and Subsurface Technologies' (90 min., Part of modul grade 100 %) • Semester-accompanying exercises
Requirements for the award of credit points • Passed final module examination: written exam • Passed semester-accompanying exercises
Module applicability MSc. Mechanical Engineering MSc. Geosciences
Weight of the mark for the final score Percentage of total grade [%] = $5 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.

Geothermal Energy Systems and Downstream Technologies					
Geothermal Energy Systems and Downstream Technologies					
Module number 138620	Credits 5 CP	Workload 150 h	Semester[s] 1. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Geothermal Energy Systems and Downstream Technologies			Contact hours a) 4 WLH (60 h)	Self-study a) 90 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr. rer. nat. Rolf Bracke a) Prof. Dr. rer. nat. Rolf Bracke					
Admission requirements Recommended previous knowledge: English language skills: "Test of English as a Foreign Language" (TOEFL): the test result in the internet version (iBT) should be at least 80 points, or "International English Language Testing System" (IELTS): minimum overall score "6" ("academic").					
Learning outcome, core skills The course provides an introduction to downstream geothermal development, focusing on the direct use of geothermal energy for heating and cooling and/or its conversion to electricity. Students will learn to identify useful geothermal utilization options, understand the thermodynamics of fluid and steam cycles, describe the components and functions of a power plant, and understand how a heat pump works and how to evaluate its efficiency. The course also focuses on the opportunities and challenges of geothermal energy in industrial and agricultural applications and in district heating systems and the basics of economic calculations. The students will be able to specify steps for district heating planning, understand the significance of thermal storage and calculate leveled costs of heat. The lecture is accompanied by an exercise with practical examples: The students will acquire the following skills: • Describe the main technical solutions for direct, indirect and combined electricity and heat production uses • Propose possible applications for available resource temperatures • Describe the interactions of geothermal energy conversion systems: reservoir-well-piping-plant-reinjection • Match the different power plant types and technical applications to corresponding reservoir conditions • Identify the components of heat conversion technologies • Develop technical solutions for given reservoir conditions, and regional or local energy demands • Compare the different cooling energy sources and choose the right cooling system for a site • Name the main elements for transmission and urban underground pipeline systems • Estimate the environmental and social impacts of geothermal projects • Illustrate the phases and cumulative costs at various stages of development					
Contents					

a)

- Geothermal energy systems and utilization options
- Thermodynamics of fluid and steam cycles, fluid mechanics, and heat transfer applied to geothermal energy conversion systems
- Power plant technologies based on flash steam, direct steam, binary conversion systems, and hybrid systems
- Cooling technologies
- Operation principle of heat pumps and thermodynamic reference cycle,
- COP / efficiency evaluation
- Compressors and refrigerants
- District heating networks and industrial and agricultural applications
- Heat storage
- Corrosion and scaling processes
- Social and environmental impacts
- Case studies
- Economics, finance, and risk analysis of a geothermal project

Educational form / Language

a) Lecture (3 WLH) / Tutorial (1 WLH) / English

Examination methods

- Written exam 'Geothermal Energy Systems and Downstream Technologies' (90 min., Part of modul grade 100 %)
- Semester-accompanying tasks: exercises

Requirements for the award of credit points

Passed final module examination: Written exam and module exercises

Module applicability

MSc. Mechanical Engineering

M.Sc. Sales Engineering and Product Management

Weight of the mark for the final score

Percentage of total grade [%] = $5 \cdot 100 \cdot \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

German A1 German A1					
Module number CE-W13/SE-O-23	Credits 5 CP	Workload 150 h	Semester[s] 1./3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) German A1 (125510)			Contact hours a) 4 WLH (60 h)	Self-study a) 30 h	Frequency a) each winter
Module coordinator and lecturer(s) M.A. Julia Salzinger a) M.A. Julia Salzinger					
Admission requirements Recommended previous knowledge: This course is aimed at beginners without any previous knowledge (Common European Framework of Reference for Languages)					
Learning outcome, core skills Students • can understand and use familiar everyday expressions. • engage in simple spoken communication. • read and understand short written texts. • write short personal messages and texts. • use basic grammar structures and vocabulary accurately. • develop listening comprehension for everyday contexts. • gain confidence in using German in real-life situations.					
Contents a) This course introduces students to the basics of the German language and helps them build essential communication skills for everyday situations. Through engaging activities, students learn to understand and use familiar expressions, ask and answer simple questions, and describe themselves and their surroundings. The course covers key topics such as personal information, family and hobbies, shopping, food and drink, daily routines, travel, and health. Emphasis is placed on listening and speaking, with integrated reading and writing tasks. Basic grammar, vocabulary, and pronunciation are taught in context to support meaningful communication.					
Educational form / Language a) Seminar / German / English					
Examination methods • Written exam 'German A1' (70 min., Part of modul grade 100 %, Written exam (percentage of the overall grade 75%) with Oral exam (20 minutes/pair, percentage of the overall grade 25%)) • Compulsory attendance 'German A1 - Course attendance' (0Part of modul grade 0 %, Preliminary work for the exam) • Course attendance (75%)					
Requirements for the award of credit points					

- Course attendance (75%)
- Passing the final written and oral exam

Module applicability

- M.Sc. Computational Engineering
- M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $5 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Ground Exploration Methods					
Ground Exploration Methods					
Module number SE-CO-26	Credits 11 CP	Workload 330 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Optimization methods for geophysics (177080) b) Gravity and magnetics / Potential fields (177020)			Contact hours a) 4 WLH (60 h) b) 3 WLH (45 h)	Self-study a) 120 h b) 105 h	Frequency a) each summer b) each summer
Module coordinator and lecturer(s) Prof. Dr. Jonathan Bedford a) Prof. Dr. Jonathan Bedford b) Dr. Kaspar Fischer					
Admission requirements Recommended previous knowledge: a) For students enrolled in MSc programs who have completed math and physics modules in their Bsc education. Completion of Introduction to programming in python or Introduction to programming in Matlab. b) Participants are expected to have prior knowledge of basic geophysics, vector calculus and differential equations, as well as familiarity with fundamental gravity and magnetic concepts at BSc level. Basic experience with a scientific computing environment (e.g. Matlab or Python) is recommended. Passed courses: Continuum mechanics of the module Physics of the solid Earth, Introduction to programming in Python of the module Python programming for Geosciences.					
Learning outcome, core skills a) After completion of the module the student will be able to: - understand how model parameters are optimized by the geoscientific research community and the various approaches for estimating model uncertainties, - propose optimization strategies given the specific model parameters, datasets, physics, and constraints of the problem, and - implement simple linear and non-linear optimizations on a computer. b) After completion of the module the student will be able to: - Describe gravitational and magnetic fields and the geoid. - Compute gravitational and magnetic fields from their potential. - Formulate and solve basic forward and inverse problems in gravity and magnetics. - Apply standard corrections to regional gravity and magnetic data and understand key terms used in potential-field applications. - Interpret gravity and magnetic anomaly maps in terms of subsurface density and magnetization structure (e.g. basins, intrusions, ore bodies). - Assess resolution limits, non-uniqueness, and the role of prior information in potential-field inversions.					

- Construct simple quantitative models from measured data and implement basic processing and modelling workflows in a scientific computing environment.

Contents

a)

First we will explore classical optimization approaches, that have been developed heavily in geophysics over the past decades, and that can nowadays be classed as sub-types of supervised machine learning that are suitable for models with a few thousand parameters. In this course, we will first cover these classical inversion approaches before understanding the approaches that facilitate the optimization of millions (to billions) of parameters in deep learning.

The lecture series will through the following topics:

(1) Introduction to concepts of data vector, model vector, and model assumptions (d, m, and G of traditional geophysical inversion problems). (2) Linear problems and their solution through the matrix solution of normal equations (least squares regression). (3) Non-linear inverse problems and their iterative solutions. (4) How data errors translate into model uncertainties. (5) The concepts of regularization and parameter constraints. (6) Model resolution and data sensitivity (7) Terminology of traditional geophysical inversion in more universal, machine learning optimization language. Distinctions between three types of machine learning (supervised, unsupervised, reinforcement) and how these relate to the framework of classical linear and non-linear optimization approaches. (8) Introduction to the optimization methods of deep learning and understand how modern optimization problems scale on modern computing hardware.

b)

- Newtonian potential and gravitational field.
- Magnetic potential, magnetization, and the geomagnetic field.
- The geoid and regional gravity fields.
- Spherical harmonic analysis of global gravity and magnetic fields.
- Forward and inverse methods in potential-field geophysics.
- Fourier-domain modelling, upward continuation, analytic signal, and Hilbert transformation.
- Gravity and magnetic anomalies of typical geological structures (e.g. sedimentary basins, faults, intrusions, ore bodies).
- Data acquisition and processing for gravity and magnetic surveys (reference fields, basic corrections, anomaly calculation).
- Numerical exercises on forward modelling, simple inversion, and data processing in a scientific computing environment.

Educational form / Language

a) Lecture (2 WLH) / Tutorial (2 WLH) / English

b) Lecture (2 WLH) / Tutorial (1 WLH) / English

Examination methods

- Exercises 'Optimization methods for geophysics' (Part of modul grade 55 %, Weekly, 20-minute long quizzes during weeks 2-10: The best 5 results from a total of 9 quizzes will be counted towards 60% of the final grade. 10% of the grade will be assessed from participation. 30% will come from a final independent coding exercise that takes place under exam conditions during the semester exam period. Therefore, there is a mixed mode of assessment including written quizzes, an examined programming exercise, and general effort of participation.)
- Written exam 'Gravity and magnetics / Potential fields' (Part of modul grade 45 %, The module is assessed by a written examination and additional continuous assessment during the teaching period.

The written examination contributes 60% to the final module grade. The continuous assessment component (e.g. assignments, quizzes, or programming exercises) contributes 40% to the final module grade. The final module grade is determined from the combined percentage score of the continuous assessment and the written examination.)

Requirements for the award of credit points

- a) Credit points can be awarded if the student accumulates $\geq 50\%$ across the various modes of assessment.
- b) The final grade of the combined percentage score of the continuous assessment and the written examination must reach 50% or more.

Module applicability

- M.Sc. Subsurface Engineering
- M.Sc. Geosciences

Weight of the mark for the final score

Percentage of total grade [%] = $11 \cdot 100 \cdot \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

- a) Each week, we will introduce new concepts in the 2 hour lecture slot (with 10 minute break halfway through). On later day in the week, there will be a 2 hour practical in which students carry out an optimization exercise. Starting in week 2, there will be a quiz (20 minutes in duration) at the beginning of each lecture. Starting in week 10, there will be a series of exam preparation programming exercises in which students accumulate their own working optimization scripts that will be useful in the exam and beyond.
- b) The module consists of weekly lectures and accompanying exercises. Each week, new theoretical concepts are introduced in a 90-minute lecture. These concepts are then applied and deepened in a 45-minute exercise session, which may include analytical problem solving, numerical assignments, and computer-based data processing or modelling tasks. In weeks with a stronger numerical focus, the balance between lecture and exercise time may be adjusted accordingly.

Groundwater Hydraulics Groundwater Hydraulics					
Module number SE-C-4	Credits 5 CP	Workload 150 h	Semester[s] 1. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Groundwater Hydraulics (177304)			Contact hours a) 4 WLH (60 h)	Self-study a) 90 h	Frequency a) each winter
Module coordinator and lecturer(s) PD Dr. Thomas Heinze a) PD Dr. Thomas Heinze					
Admission requirements					
Learning outcome, core skills After completion of this module, the students will • be able to describe and evaluate groundwater flow and conservative mass transport in the subsurface. • know methods of experimental investigation and determination of hydraulic parameters under different boundary conditions, and can derive and evaluate these mathematically. • be familiar with the evaluation and interpretation of groundwater hydraulic parameters and use them to deal with classical hydrogeological problems.					
Contents a) • Methods for the collection and evaluation of hydraulic parameters (Darcy-tests, pump tests, Slug&Bail tests) • Conveyance of knowledge about groundwater flow and the construction of groundwater level plans • Execution and evaluation of pumping tests by means of graphical and analytical solutions • Practical tasks for lowering the groundwater level through well systems in excavation pits or calculation of well yield					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English					
Examination methods • Written exam 'Groundwater Hydraulics' (60 min., Part of modul grade 100 %)					
Requirements for the award of credit points • Passing the written examination					
Module applicability • M.Sc. Subsurface Engineering • M.Sc. Geosciences					
Weight of the mark for the final score Percentage of total grade [%] = $5 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.					
Further Information					

- Relevant literature and specific study material will be supplied at the beginning of the lectures.

Hydrogeological Methods Hydrogeological Methods					
Module number SE-CO-15	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size 8
Courses a) Analysis of measurement results (177358) b) Hydrogeological Field Exercises (177355)			Contact hours a) 2 WLH (30 h) b) 3 WLH (45 h)	Self-study a) 50 h b) 55 h	Frequency a) each summer b) each summer
Module coordinator and lecturer(s) PD Dr. Thomas Heinze a) PD Dr. Thomas Heinze b) PD Dr. Thomas Heinze					
Admission requirements Recommended previous knowledge: Passing of the examination for "Groundwater Hydraulics"					
Learning outcome, core skills At the end of the module, participants will • be able to perform various hydrogeological field experiments and analyze the results, • understand the concept of applying organic substances as Tracers for groundwater flow, • plan and execute tracer tests, use field and laboratory equipment for tracer detection, process and analyze the tracer test results, • write a scientific report, • communicate with water- and environmental authorities and • transfer theoretical knowledge to practical applications.					
Contents a) Computer-based analysis of measurement results from the field exercises using GIS, EXCEL, MATLAB, and specialized software for the respective tasks: Analysis of pumping tests using curve matching to obtain aquifer properties & characterize aquifer; Curve matching of tracer passage curves to obtain transport properties; (Inverse) modeling of infiltration experiments to obtain infiltration capacity of the soil; GIS based catchment analysis and calculations of groundwater recharge. b) The most important hydrogeological Field methods will be used to evaluate and plan the water supply well: pumping tests, infiltration tests, run of measurements extraction of groundwater and petrochemical sampling determination of petrochemical and physical groundwater parameters, use of hydrochemical analyses in the field, shallow drilling, hydrogeological and engineering geology goal characterization of the soil profile in boreholes, measuring of the groundwater level and plotting of groundwater contour maps. All the data of the performed experiments are documented and interpreted in a written report.					
Educational form / Language a) Seminar / English b) Block seminar / English					
Examination methods					

- Term paper 'Hydrogeological Methods' (10 h., Part of modul grade 100 %)

Requirements for the award of credit points

- Pass Written report (part of final mark 100 %) and active participation on the field exercises

Module applicability

- M.Sc. Subsurface Engineering
- M.Sc. Geosciences

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

relevant literature and specific study material will be supplied at the beginning of the lectures

b) Block course (4 days)

Inelastic Finite Element Methods for Structures					
Inelastic Finite Element Methods for Structures					
Module number BI-WP59/CE-WP06/SE-CO-20	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Inelastic Finite Element Methods for Structures (127518)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr. Roger A. Sauer a) Dr.-Ing. Vladislav Gudzulic, Prof. Dr. Roger A. Sauer					
Admission requirements Recommended previous knowledge: Basic knowledge of tensor analysis, continuum mechanics and linear Finite Element Methods. Previous participation in the course Nonlinear Finite Element Method for Structures is recommended and participation Object-Oriented Modeling and Implementation of Structural Analysis Software is advantageous.					
Learning outcome, core skills After successfully completing the module the students will • understand the fundamentals of dissipative processes in the context of modeling inelasticity in quasi-brittle materials, using concrete as the main example. • learn the computational approaches for modeling elastoplastic, damage and friction behavior. • be familiar with the concept of strain localization and localized failure, including their mathematical and numerical implications, as well as strategies to address them. • gain practical experience with implementation and algorithmic treatment of inelasticity in the context of incremental-iterative nonlinear structural analysis. • develop skills to select appropriate numerical methods and material models, including multi-scale approaches, for practical problems and critically assess their limitations. • be able to perform incremental analyses of progressive structural failure, critically evaluate the results, and assess the key design parameters such as load and deformation at the onset of inelasticity and structural redundancy (plastic reserve/residual strength).					
Contents a) The course is concerned with inelastic material models including their algorithmic formulation and implementation in the framework of nonlinear finite element method. Strain localization and localized failure will be explored in detail, focusing on their mathematical and numerical implications, as well as the strategies to address them. Further, the course covers the fundamental theory and implementation aspects of frictional contact. Special attention will be given to efficient algorithms for physically nonlinear structural analyses, including elastoplastic and damage models for quasi-brittle materials, as well as friction algorithms. While concrete serves as a primary example, these modeling approaches are equally applicable to other materials such as rocks, fiber composites, sea ice, bone, stiff soils, and wood. The course includes					

coding exercises and a final assignment, where students implement a selected inelastic model into a finite element program and apply it to nonlinear structural analysis.

Educational form / Language

a) Lecture with tutorial / English

Examination methods

- Term paper 'Inelastic Finite Element Methods for Structures' (90 h., Part of modul grade 100 %, Project work (implementation of an inelastic model into FE code) with final student presentation / bonus points for homework assignments)

Requirements for the award of credit points

- Passed final module examination

Module applicability

- M.Sc. Civil Engineering
- M.Sc. Computational Engineering
- M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Introduction to advanced numerical methods for particulate media Introduction to advanced numerical methods for particulate media					
Module number SE-O-16	Credits 3 CP	Workload 90 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Introduction to advanced numerical methods for particulate media (125817)			Contact hours a) 2 WLH (30 h)	Self-study a) 60 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Dr.-Ing. Mohammad Salimi					
Admission requirements Recommended previous knowledge: completed module in Numerical Simulation in Geotechnics					
Learning outcome, core skills After successfully completing the module, students will be able to: • Understand DEM fundamentals and applications • Implement particle and boundary modeling techniques • Apply force models and contact detection schemes • Utilize time integration methods • Comprehend DEM's strengths and limitations • Develop basic DEM code for triaxial test simulations • Apply DEM to real-world geotechnical engineering problems					
Contents a) This course introduces the Discrete Element Method (DEM), a powerful computational technique for analyzing particulate materials in subsurface engineering. The lecture contents cover the following topics: 1. Foundations of Computational Methods 2. Theoretical Fundamentals 3. Computational Aspects 4. Soft Sphere Approach in Detail 5. Damping Mechanisms 6. Stress Analysis in DEM 7. Strain and Measurable Quantities 8. Forces and Torques 9. Advanced Contact Models 10. Non-Spherical Particle Shapes 11. Boundary Conditions 12. Model Validation and Calibration 13. Servo Mechanisms and Scaling 14. Advanced Forces and Torques 15. DEM in Practice					

The course emphasizes physical understanding over programming details, using easy-to-follow slides and practical examples. This course provides a foundation for those interested in pursuing advanced topics in computational methods for particulate media.

Educational form / Language

a) Lecture (2 WLH) / English

Examination methods

- Term paper 'Introduction to advanced numerical methods for particulate media' (60 h., Part of modul grade 100 %, deadline will be announced at the beginning of the semester)

Requirements for the award of credit points

- Successful completion and presentation of the final project

Module applicability

- M.Sc. Subsurface Engineering
- M.Sc. Civil Engineering
- M.Sc. Computational Engineering

The skills and knowledge gained in this course are transferable to various fields dealing with particulate media and computational modeling.

Weight of the mark for the final score

Percentage of total grade [%] = $3 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Master Thesis Master Thesis					
Module number SE-MT	Credits 30 CP	Workload 900 h	Semester[s] Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Master Thesis			Contact hours	Self-study a) 900 h	Frequency a) keine Angabe
Module coordinator and lecturer(s) All professors of the study program a) Professors, Lecturers and Assistants					
Admission requirements In order to be admitted to the master's thesis, modules amounting to 70 credit points must be successfully completed.					
Learning outcome, core skills With the completion of the master thesis - the students acquire the ability to plan, organize, develop, operate and present complex problems in Subsurface Engineering. - qualifies students to work independently in the field of Subsurface Engineering under the supervision of an advisor. - the associated presentation serves to promote the students' ability to deal with subject-specific problems and to present them in an appropriate and comprehensible manner. Further, it serves to prove whether the students have acquired the profound specialised knowledge, which is required to take the step from their studies to professional life, whether they have developed the ability to deal with problems from their in-depth subject by applying scientific methods, and to apply their scientific knowledge.					
Contents a) The master thesis can either be a theoretical or a practical work. The topic is determined by the respective supervisor. The results should both be visualized and illustrated in writing in a detailed manner. This particularly includes a summary, an outline and a list of the references used within a specific thesis.					
Educational form / Language a) Final thesis / English / German					
Examination methods Final thesis 'Master Thesis' (900 h., Part of modul grade 100 %, Review of the Master Thesis Report and Oral Presentation (30 min))					
Requirements for the award of credit points Successful evaluation (grade greater than 50%) of Master Thesis and Oral Presentation					
Module applicability M.Sc. Subsurface Engineering					
Weight of the mark for the final score Percentage of total grade [%] = 30 * 100 * FAK / DIV					

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Independent work in seminar rooms and computer labs; testing plants, where applicable.

The topic of a Master Thesis is formulated by a lecturer of the course. The student conducts research independently and presents the results in the form of a final written report and an oral presentation (upon agreement with the respective lecturer).

Mathematical Aspects of Differential Equations and Numerical Mathematics					
Mathematical Aspects of Differential Equations and Numerical Mathematics					
Module number CE-P01/SE-C-1/MADENM	Credits 6 CP	Workload 180 h	Semester[s] 1. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Mathematical Aspects of Differential Equations and Numerical Mathematics (125500)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr. Martin Kronbichler a) Prof. Dr. Martin Kronbichler					
Admission requirements Recommended previous knowledge: No prior knowledge or preliminary modules. Basic calculus and experience with matrices.					
Learning outcome, core skills The course will focus on the mathematical formulation of differential equations with applications to elastic theory and fluid mechanics. It gives an introduction to geometric linear algebra with emphasis on function spaces, coupled with the elementary aspects of partial differential equations. The students should learn to understand the mathematics side of the Finite Element Method (FEM) for elliptic PDE in low dimensions, appropriate Sobolev geometries, the FEM for Dirichlet and Neumann problems. For that reason, the basic principles in methods of error estimation are described to realize the understanding of fast and efficient solvers for the resulting matrix equations. As overall learning goal, the students should attain familiarity with modern methods and concepts for the numerical solution of complicated mathematical problems. After successfully completing the module, the students • should understand the mathematics side of the Finite Element Method for elliptic PDE in low dimensions, appropriate Sobolev geometries, the FEM for Dirichlet and Neumann problems, should attain familiarity with modern methods and concepts for the numerical solution of complicated mathematical problems.					
Contents a) Linear algebra: Basic concepts and techniques for finite- and infinite-dimensional function spaces stressing the role of linear differential operators. Numerical algorithms for solving linear systems. The mathematics of the finite element method in the context of elliptic partial differential equations (model problems) in dimension two.					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English					
Examination methods • Written exam 'Mathematical Aspects of Differential Equations and Numerical Mathematics' (120 min., Part of modul grade 100 %)					
Requirements for the award of credit points					

• Passed final module examination
Module applicability • M.Sc. Computational Engineering • M.Sc. Subsurface Engineering
Weight of the mark for the final score Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.
Further Information Remark: Due to the mixed background of the students, the exercise sessions often amount to additional lectures.

Mechanical Modeling of Materials Mechanical Modeling of Materials					
Module number CE-P02/SE-CO-19/MMoM	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Mechanical Modelling of Materials (125501)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Daniel Balzani a) Prof. Dr.-Ing. Daniel Balzani					
Admission requirements Recommended previous knowledge: Basic knowledge in Mathematics and Mechanics (Statics, Dynamics and Strength of Materials)					
Learning outcome, core skills The objective of this course is to present advanced issues of mechanics and the continuum-based modelling of materials starting with basic rheological models. The concepts introduced will be applied to numerous classes of materials. Basic constitutive formulations will be discussed numerically. After successfully completing the module, the students • should have a deep understanding of the theoretical basis of classical material models, • should know how to derive constitutive equations from rheological models, • should be able to implement a material model with a suitable algorithmic treatment in finite element software.					
Contents a) Several advanced issues of the mechanical behaviour of materials are addressed in this course. More precisely, the following topics will be covered: • Basic concepts of continuum mechanics (introduction) • Introduction to the rheology of materials • Theoretical concepts of constitutive modelling • Derivation of 1- and 3-dimensional models in the geometrically linearized setting for - Linear- and nonlinear elasticity - Damage - Visco-elasticity - Elasto-plasticity • Aspects of parameter identification/adjustment • Algorithmic implementation in the context of the finite element method and analysis of simple boundary and initial value problems					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English					

Examination methods • Written exam 'Mechanical Modeling of Materials' (90 min., Part of modul grade 100 %)
Requirements for the award of credit points • Passed final module examination
Module applicability • M.Sc. Computational Engineering • M.Sc. Subsurface Engineering
Weight of the mark for the final score Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.
Further Information

Nonlinear Finite Element Methods for Structures Nonlinear Finite Element Methods for Structures					
Module number BI-WP05/CE-WP04/SE-CO-23	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Nonlinear Finite Element Methods for Structures (126515)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr. Roger A. Sauer a) Assistants, Prof. Dr. Roger A. Sauer					
Admission requirements Recommended previous knowledge: Finite Element Methods in Linear Structural Mechanics (CE-P05/SE-C-2/FEM-I), Basic knowledge in Structural Mechanics					
Learning outcome, core skills After successfully completing the module, the students • understand the origins and implications of nonlinearities in structural mechanics • are able to formulate and solve nonlinear engineering problems with the finite element method accounting for geometrical and material nonlinearities • can perform structural analyses, where the linear (1st order) theory is not valid (e.g. cables, membrane structures, load bearing and stability analyses beyond limit loads), and they can assess the results.					
Contents a) The main topics of the course are: • formulation and finite element discretization of the basic equations for nonlinear materials and geometrically nonlinear analysis in structural mechanics • development of algorithms for the solution of the underlying nonlinear material and structural equations • application to analyze the structural behavior considering material nonlinearity and large deformations • nonlinear stability analysis of structures					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English					
Examination methods • Written exam 'Nonlinear Finite Element Methods for Structures' (120 min., Part of modul grade 100 %)					
Requirements for the award of credit points • Passed final module examination					
Module applicability • M.Sc. Civil Engineering					

-
- M.Sc. Computational Engineering
 - M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Numerical Methods and Stochastics Numerical Methods and Stochastics					
Module number CE-WP08/SE-CO-8/NMS	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Numerical Methods and Stochastics (126510)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr. Martin Kronbichler a) Assistants, Prof. Dr. Martin Kronbichler					
Admission requirements Recommended previous knowledge: Basic knowledge of: partial differential equations, numerical methods and stochastics					
Learning outcome, core skills Students should become familiar with modern numerical and stochastic methods After successfully completing the module, the students • should be able to formulate and analyze data from a probabilistic perspective, • should understand the theoretical aspects of FEM and FVM methods, • should be familiar with modern iterative solvers for large systems of linear equations and their necessity for numerical PDE solving, • should be familiar with standard methods for solving optimization problems.					
Contents a) Numerical Methods: • Boundary value problems for ordinary differential equations (shooting, difference and finite element methods) • Finite element methods (brief retrospection as a basis for further material) • Efficient solvers (preconditioned conjugate gradient and multigrid algorithms) • Finite volume methods (systems in divergence form, discretization, relation to finite element methods) • Nonlinear optimization (gradient-type methods, derivative-free methods, simulated annealing) Stochastics: • Fundamental concepts of probability and statistics, such as random variables, univariate distributions & densities, descriptive statistics, parameter estimation, & law of large no • Regression, such as univariate and multivariate linear regression, least-squares estimation, data transformations, qualitative predictors, and regularization • Exploratory data analysis, such as qq-plots and summary statistics					
Educational form / Language a) Lecture (3 WLH) / Tutorial (1 WLH) / English					

Examination methods

- Written exam 'Numerical Methods and Stochastics' (180 min., Part of modul grade 100 %)

Requirements for the award of credit points

- Passed final module examination

Module applicability

- M.Sc. Computational Engineering
- M.Sc. Civil Engineering
- M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Numerical Simulation in Geotechnics and Tunneling					
Numerical Simulation in Geotechnics and Tunneling					
Module number BI-WP24/CE-WP09/SE-CO-3	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Numerical Simulation in Geotechnics and Tunneling (128018)			Contact hours a) 4 WLH (60 h)	Self-study a) 60 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Dr.-Ing. Mohammad Salimi					
Admission requirements					
Learning outcome, core skills After successfully completing the module, the students are able to • implement numerical models of complex boundary value problems in geotechnical engineering and tunneling, creating the adequate geometrical models, • evaluate numerical models and their results in a critical way, • acquire adequate knowledge in fundamentals of the finite element method to be able to adopt numerical simulation in design and control of geotechnical or tunneling problems with focus on the interactions between the soil and structures.					
Contents a) The course deals with the numerical modeling of various geotechnical structures and tunnels: • Overall insight to the numerical simulation of geotechnical problems by using the finite element method and concise review of simple constitutive models • Introduction to Hardening Soil (HS) and Hardening Soil Small Strain (HSS) model and calibration of constitutive parameters of the HS and HSS model • Simulation of lab tests and optimization of constitutive parameters • Details for proper simulation in geotechnics by addressing constructional details, optimum discretization, boundary and initial conditions • Fundamentals of contact elements and their applications in geotechnical modeling • Considering water pressures in numerical simulations: soil-water interactions in drained, undrained, consolidation, and fully coupled hydromechanical analyses • Creation of models, execution of calculations and analysis of results for various geotechnical boundary value problems: shallow foundations, retaining walls, excavation, embankments, consolidation, slope failure, tunneling • Methods to validate and verify the reliability of numerical models by exploring the numerical outputs in space and time and the evaluation of numerical results • Introduction to FE simulations with Plaxis 2D and numgeo • Introduction to Finite Element Limit Analysis (FELA) and the FE software OptumG2 • Comparison of Plaxis2D, numgeo and OptumG2 for different boundary value problems • Brief overview of other numerical methods (e.g. DEM, MPM, boundary element method)					

Educational form / Language a) Lecture (4 WLH) / English
Examination methods • Written exam 'Numerical Simulation in Geotechnics and Tunneling' (180 min., Part of modul grade 100 %)

Operation and Maintenance of Tunnels and Utility Pipes					
Operation and Maintenance of Tunnels and Utility Pipes					
Module number BI-WP26/SE-CO-5	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size 20
Courses a) Facility management of under-ground transportation infrastructure (129021) b) Pipeline maintenance and network management (129022)			Contact hours a) 2 WLH (30 h) b) 2 WLH (30 h)	Self-study a) 60 h b) 60 h	Frequency a) each winter b) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Markus Thewes a) Dr.-Ing. Roland Leuker, Prof. Dr.-Ing. Markus Thewes b) Prof. Dr.-Ing. Markus Thewes, Dr.-Ing. habil. Bert Bosseler					
Admission requirements Recommended previous knowledge: Knowledge in "construction operation and construction process engineering" as well as constructional knowledge					
Learning outcome, core skills This module teaches a wide range of aspects of operation and maintenance of tunnels and underground utility pipelines. Aspects of structural protection and the necessary methods and techniques of building maintenance are presented, the equipment and techniques of operating concepts (normal and emergency operation) of underground infrastructure are shown and management concepts and evaluation mechanisms for economic and financial efficiency studies are discussed. The students should thus be put in a position to select appropriate measures for the maintenance of tunnels and utility pipes, or to carry out profitability analyses of such structures - for example based on principles for the operation and maintenance of tunnels and lines. For a professional activity as operators of pipeline networks or tunnel constructions such basic knowledge is indispensable. Basic skills for operation and maintenance of underground infrastructure are presented. These are – in reference to a declining new construction activity and increasing maintenance requirements of the enormously large existing infrastructure stock – of high importance for the future occupational profile of civil and environmental engineers.					
Contents a) The courses of this part-module deal with the extended basic knowledge of operation and maintenance of tunnels. This includes: • Regulations and boundary conditions in reference to transport modes • Operating equipment in tunnels • Operation of tunnels (concepts, features and structure of control center operation, surveillance and inspection) • Safety and security • Rehabilitation and maintenance (points of maintenance, upgrade under operation, rehabilitation techniques, rehabilitation under operation)					

- Building management / Tunnel Facility Management (collecting and processing of operation data, operating concept e.g. PPP, Lifecycle-Management)

b)

The courses of this part-module deal with the extended basic knowledge of operation and Maintenance of lines. This includes:

- Introduction: underground sewer and pipeline engineering
- Open cut method – practical use
- Structural safety of pipes in open-cut construction
- New sewers and pipelines using trenchless methods including pipe jacking
- Rehabilitation – objectives and tasks
- Rehabilitation – Replacement
- Rehabilitation – Repair
- Rehabilitation - Renovation
- Service-life of sewers and pipelines including tightness, root resistance, heavy rainfall events

Educational form / Language

a) Lecture (2 WLH) / English

b) Lecture (2 WLH) / English

Examination methods

- Written exam 'Operation and Maintenance of Tunnels and Utility pipes' (120 min., Part of modul grade 100 %, optionally Englisch or German)

Requirements for the award of credit points

- Passed module examination: Written exam

Module applicability

- M.Sc. Civil Engineering
- M.Sc. Subsurface Engineering
- M.Sc. Geosciences

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Practical Soil Mechanics Practical Soil Mechanics					
Module number SE-O-4	Credits 3 CP	Workload 90 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Practical Soil Mechanics (127018)			Contact hours a) 2 WLH (30 h)	Self-study a) 60 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Dr.-Ing. Wiebke Baille					
Admission requirements Recommended previous knowledge: Completed module in Soil and Rock behaviour (Soil behaviour and simple constitutive models for soils)					
Learning outcome, core skills After successfully completing the modules, the students can • develop strategies for the experimental investigation of practical geotechnical problems, • analyze the results of the experimental investigation.					
Contents a) Different measuring methods used in geotechnical laboratory and field tests are presented. The structure of a measuring chain is explained. Selected laboratory and field tests will be performed and analyzed by the students (including discussion / interpretation of the test results): • Soil classification tests (water content, grain size distribution, Atterberg limits (plasticity properties), maximum and minimum density, particle density), • Determination of shear strength parameters (direct shear test, triaxial test), • Determination of compressibility of soils (oedometer test)					
Educational form / Language a) Seminar / English / German					
Examination methods • Exercises 'Practical Soil Mechanics - Exercises' (15 h., Part of modul grade 100 %, with oral Examination)					
Requirements for the award of credit points • Exercises (protocols and analysis of performed tests) with oral examination • Attendance during classes.					
Module applicability • M.Sc. Subsurface Engineering					
Weight of the mark for the final score Percentage of total grade [%] = $3 \cdot 100 \cdot \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.					
Further Information					

Practical Training on Tunneling and Pipeline Construction Techniques					
Practical Training on Tunneling and Pipeline Construction Techniques					
Module number BI-W03/SE-O-1	Credits 2 CP	Workload 60 h	Semester[s] 2. Sem.	Duration 1 Week Semester[s]	Group size 20
Courses a) Practical Training on Tunneling and Pipeline Construction Methods (128202)			Contact hours a) 3 WLH (45 h)	Self-study a) 15 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr.-Ing. Markus Thewes a) Prof. Dr.-Ing. Markus Thewes					
Admission requirements					
Learning outcome, core skills The module is designed to give students a basic understanding of the processes and techniques used in tunnel and pipeline construction that are common processing and building material testing methods. The students should learn to independently apply standards from these areas in a practice-oriented way and to develop a corresponding basic understanding. They should be acquired to critically examine the usual construction site conditions and the conditions of the techniques of tunnel and pipeline construction and foundation engineering.					
Contents a) The Practical Training results in basic knowledge to selected and to monitor techniques of Tunneling, Pipeline Construction and Foundation Engineering: • Sprayed Concrete (Shotcrete) in conventional tunneling • Early strength testing of sprayed concrete • Foam conditioning of soil in mechanized tunneling • Sealing techniques: welding and testing of plastic geomembranes • Chemical sealing and rehabilitation processes of leaks and concrete damage • In-situ inspection of utility pipes • Application of bentonite suspensions: standardised test methods					
Educational form / Language a) Block seminar / Internship / English					
Examination methods • Internship 'Practical Training on Tunneling and Pipeline Construction Methods' (60 h., ungraded, Regular participation)					
Requirements for the award of credit points • Full time participation					
Module applicability • M.Sc. Civil Engineering • M.Sc. Subsurface Engineering					
Weight of the mark for the final score					

Percentage of total grade [%] = 0, ungraded

Further Information

This module usually takes place in the first week of the lecture-free period in the summer semester. The number of participants is limited.

Registration for participation as well as information about date/location at the Chair for Tunnelling and Construction Management (Lehrstuhl für Tunnelbau, Leitungsbau und Baubetrieb).

Problematic Soils Problematic Soils					
Module number SE-O-18	Credits 3 CP	Workload 90 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Problematic Soils (125814)			Contact hours a) 2 WLH (30 h)	Self-study a) 60 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Dr.-Ing. Wiebke Baille					
Admission requirements					
Learning outcome, core skills After successfully completing the modules, the students are able to • assess unsaturated soil behaviour, special soil mechanical properties, phenomena, and the behavior of problematic soils, • can design an appropriate experimental program (laboratory / field tests) for an investigation of problematic soils, • assess difficult ground conditions and develop solutions for these situations.					
Contents a) The course deals firstly with the basics of unsaturated soil behaviour, and further with different phenomena, that can cause difficulties in civil works for some types of soils: • Unsaturated soil behaviour • Swelling and shrinkage behaviour • Physico-chemical effects in clays • Structure and fabric, compacted soils • Collapsible soils • Soft plastic and organic soils • Experimental methods for investigations on these soils and phenomena					
Educational form / Language a) Lecture with tutorial / English					
Examination methods • Written exam 'Problematic Soils' (180 min., Part of modul grade 100 %)					
Requirements for the award of credit points • Passed final written examination					
Module applicability • M.Sc. Subsurface Engineering					
Weight of the mark for the final score Percentage of total grade [%] = $3 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.					

Further Information

Project Work					
Project Work					
Module number SE-C-6	Credits 4 CP	Workload 120 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Project Work (125805)			Contact hours	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) All professors of the study program a) Professors, Lecturers and Assistants					
Admission requirements					
Learning outcome, core skills After completion of the project work, the students • will have gained experience in working on a problem individually or in small groups. • are able to organize and Coordinate the assignment of tasks independently under the supervision of an advisor. • should have gathered new information and insights into the activities of practicing engineers while acquiring skills in innovative research fields. • will be able to present technical projects, and to develop problem solution strategies and will hence also obtain worthwhile communication skills.					
Contents a) The project topic is usually determined by the respective lecturer or one of his/her assistants. In addition to this, students may also conduct project work on topics defined by companies from industry or other equivalent institutions. However, the project work must be completed under the supervision of one of the lecturers from the study program Subsurface engineering. The student -or a small group of students - conducts a project independently and presents the results in the form of a written report and optionally, an oral presentation (upon agreement with the respective lecturer). The projects are usually devised so as to integrate interdisciplinary aspects such as • Noticing problems and describing them • Formulating envisaged goals • Team-oriented problem solutions • Organizing and optimizing one's time and work plan • Interdisciplinary problem solutions • Literature research and evaluation as well as the consultation of experts • Documentation, illustration and presentation of results					
Educational form / Language a) / English / German					
Examination methods • Term paper 'Project Work' (120 h., Part of modul grade 100 %, Oral Presentation (20 min))					
Requirements for the award of credit points					

The project paper and presentation will be graded. For this purpose, the individual achievements of the students within the project groups are separately evaluated. The evaluation includes: Written report / 75% (100% without a final presentation) and Final presentation / 25% (optional)

Module applicability

- M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $4 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Reservoir Engineering					
Reservoir Engineering					
Module number SE-CO-18	Credits 5 CP	Workload 150 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size 20
Courses a) Reservoir Engineering			Contact hours a) 3 WLH (45 h)	Self-study a) 105 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr. Erik Saenger a) Prof. Dr. Erik Saenger					
Admission requirements					
Learning outcome, core skills The students will learn the fundamentals of reservoir engineering. This broad range of knowledge will be taught with a special emphasis to geothermal and hydrocarbon exploration. After successful completion of the course, the students will be able: • to understand microseismic monitoring • to understand geophysical data from boreholes • apply the fundamentals of reservoir engineering to estimate the risks of reservoir stimulations and to estimate reservoir permeability • to transfer the fundamentals of reservoir engineering to scientific projects, e.g. to transfer • the knowledge of several case histories to new sites and to plan a reservoir monitoring system					
Contents a) • Fundamentals of reservoir engineering with the focus on geothermal applications • Interpretation of downhole measurements • Interpretation of spinner results • Measuring reservoir permeability • Conceptual models of geothermal fields • Reservoir modelling • Reservoir monitoring • Reservoir stimulation • Case Histories					
Educational form / Language a) Lecture (2 WLH) / Tutorial (1 WLH) / English					
Examination methods • Oral exam 'Reservoir Engineering' (60 min., Part of modul grade 100 %, Presentation with lecture (45 min) + Discussion (15 min))					
Requirements for the award of credit points • Pass module exam					
Module applicability • M.Sc. Subsurface Engineering					

Weight of the mark for the final score
Percentage of total grade [%] = $5 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.

Rock Mass Stress Field Rock Mass Stress Field					
Module number SE-CO-25	Credits 5 CP	Workload 150 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Stress Field and Rock Mass Behaviour (177259) b) Stress Field Modelling and Simulation (177258)			Contact hours a) 2 WLH (30 h) b) 1 WLH (15 h)	Self-study a) 55 h b) 50 h	Frequency a) each winter b) each winter
Module coordinator and lecturer(s) Prof. Dr. Tobias Backers a) Prof. Dr. Tobias Backers b) Prof. Dr. Tobias Backers					
Admission requirements					
Learning outcome, core skills Stresses in the Earth's crust are the driving 'force' of many processes and a definitive quantity of assessing the stability of geologic structures such as interfaces or faults. In addition, knowledge of the stresses at work is of extraordinary importance in the design of structures in the near-surface and deep subsurface. The English language course develops the mechanical principles for the representation of the stress field in the Earth's crust and discusses the sources of stress. Methods for estimating and measuring stresses are introduced. This includes modeling of the primary field (green and brown field) and the derivation of secondary stresses by civil engineering structural engineering measures. The simulation of the alteration of the in-situ stresses is in many rock and mining projects and mining projects to estimate the secondary stresses and the load on the geological structures and geological structures as well as civil engineering works. In addition to the lecture "Stress Field and Rock Mass behaviour", exemplary models are created autodidactically using standard software of rock are created autodidactically and the resulting stresses and their distribution are simulated. The rule is to work in teams; depending on the industry, these teams are composed internationally, depending on the industry. The English-language course takes this into account. The students are familiar with rock and rock mass behavior and the sources of stress in the Earth's crust. They know how to estimate and measure rock mass stress. In addition, the enrolled students are familiar with the determination of stress alterations and redistributions by anthropogenic sources. The students are familiar with the numerical simulation of stress alterations due to geological or constructional features using a commercial software package.					
Contents a) • Definition of stress, • Rock deformation, • Rock failure, • Rock mass definition,					

- Sources of stress in the earth crust,
- Methods of stress measurement and stress modelling,
- Determination of stress alterations and stress redistribution

b)

see above

Educational form / Language

a) Lecture with tutorial / English

b) Lecture with tutorial / English

Examination methods

- Oral exam 'Rock Mass Stress Fields' (0 min., Part of modul grade 100 %, successful submission (i.e. 50%) of 90% of the weekly homework)

Requirements for the award of credit points

- Passing the oral examination, successful submission (i.e. 50%) of 90% of the weekly homework

Module applicability

- M.Sc. Subsurface Engineering
- M.Sc. Geoscience

Weight of the mark for the final score

Percentage of total grade [%] = $5 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Seismotectonics and Seismic Hazard Seismotectonics and Seismic Hazard					
Module number SE-CO-16	Credits 6 CP	Workload 180 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Seismotectonics and Seismic Hazard (177104)			Contact hours a) 4 WLH (60 h)	Self-study a) 120 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr. Rebecca Harrington a) Prof. Dr. Rebecca Harrington					
Admission requirements					
Learning outcome, core skills A multidisciplinary approach is strongly needed in order to better understand the seismic potential of any region in the world. Geological data give us a long-term (thousands of years) view of earthquake phenomena, but they are limited to the first meters of the crust. Seismological and geophysical data can generally better describe deformation processes occurring at depth, but usually with a smaller temporal (tens of years) and spatial resolution. This course will provide an introduction to the earthquake problem from both geological and geophysical points of view, with emphasis on the methodologies commonly used to produce the data necessary to understand and quantify the seismic hazard in any active region. After successful completion of the module, students will be able to • Understand the relationship between lithosphere rheology and earthquake distribution; • Understand the relationship between frictional properties and faulting; • Understand the basics of earthquake detection and location; • Understand the relationship among subsequent earthquakes (earthquake and fault interactions); • Understand the primary (faulting) and secondary (liquefaction, landslides, etc.) effects produced by seismic events; • Understand the basics of Tectonic Geodesy; • Understand the basics of Tectonic Geomorphology; • Understand the basics of Paleoseismology; • Understand the basics of probabilistic and deterministic seismic hazard calculations.					
Contents a) Topics included in the course are: Rheology of the lithosphere, frictional properties of faults, the seismic cycle, earthquake location, geological effects of earthquakes, tectonic geodesy, tectonic geomorphology, paleoseismology, earthquake and fault interactions, probabilistic and deterministic seismic hazard. In addition to theoretical information presented via lecture material, the practical exercises teach fundamental data analysis via MATLAB, and other software distributed during the course.					
Educational form / Language a) Lecture (2 WLH) / Tutorial (2 WLH) / English / German					
Examination methods • Written exam 'Seismotectonics and Seismic Hazard' (2 h., Part of modul grade 100 %, includes evaluated written reports of the exercises)					

Requirements for the award of credit points

- Exercises must be completed (evaluated written reports) with a passing grade of 60% in order to access the final exam.
- Pass the final exam.

Module applicability

- M.Sc. Subsurface Engineering
- M.Sc. Geosciences

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Students must have successfully completed a BSc in the earth sciences. The course consists of exercises as well as lecture, and exercises must be completed with a passing grade (60%) to access to the final exam on which the module grade will be based. The course will take place in English, therefore effective oral and written communication skills in English are required.

Soil Behaviour and Simple Constitutive Models					
Soil Behaviour and Simple Constitutive Models					
Module number SE-C-5	Credits 6 CP	Workload 180 h	Semester[s] 1. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Soil Mechanics b) Soil Behaviour under Monotonic, Cyclic and Dynamic Loading (125801) c) Simple Constitutive Models for Soils			Contact hours a) 2 WLH (30 h) b) 1 WLH (15 h) c) 1 WLH (15 h)	Self-study a) 60 h b) 30 h c) 30 h	Frequency a) each winter b) each winter c) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Dr.-Ing. Mohammad Salimi b) Prof. Dr.-Ing. Torsten Wichtmann c) Prof. Dr.-Ing. Merita Tafili					
Admission requirements					
Learning outcome, core skills After successfully completing the module, the students • know how to describe and classify soils, • are able to select suitable methods for ground investigation, • can derive relevant soil properties from laboratory tests, • are able to calculate vertical and horizontal stresses in the ground and on structures, • know how to calculate time-dependent settlement, • can assess the soil behaviour under monotonic, cyclic and dynamic loading in drained and undrained conditions, • are able to apply simple constitutive laws to model the fundamental soil behaviour in numerical simulations and understand the limitations of these models, • are able to determine the parameters of simple constitutive models from laboratory test results					
Contents a) The course deals with the basic knowledge of Soil Mechanics: • Description and classification of soils • Soil properties and state parameters • Site investigations • Effect of groundwater in soils, seepage flow • Vertical stresses in the ground • Settlement and consolidation calculations • Shear strength • Earth pressure b) The course teaches advanced knowledge regarding the behaviour of various types of soils under more complex loading conditions. It addresses suitable testing methods, relevant soil properties, and their further					

use in analytical or numerical methods for the design of geotechnical structures. The following loading types are considered:

- Drained and undrained monotonic loading, critical states
- Undrained cyclic loading, liquefaction resistance
- Drained high-cyclic loading, cumulative deformations
- Dynamic loading

c)

The course introduces fundamentals of standard elastoplasticity applied to geotechnical materials in accordance to failure criteria. Additionally, it discusses the fundamentals, advantages and limitations of widely used simple constitutive models for soils such as:

- Linear Elastic (LE) model
- Mohr-Coulomb (MC) model
- Hardening Soil (HS) model

Finally, the calibration of simple constitutive models from laboratory tests will be discussed and these models will be applied to different geotechnical problems.

Educational form / Language

- a) Lecture (2 WLH) / English
- b) Lecture (1 WLH) / English
- c) Lecture (1 WLH) / English

Examination methods

- Written exam 'Soil Behaviour and Simple Constitutive Models' (180 min., Part of modul grade 100 %)

Requirements for the award of credit points

- Passing the written examination

Module applicability

- M.Sc. Subsurface Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Soil Dynamics and Geotechnical Earthquake Engineering					
Soil Dynamics and Geotechnical Earthquake Engineering					
Module number SE-CO-7	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Soil Dynamics (125815) b) Geotechnical Earthquake Engineering (125816)			Contact hours a) 2 WLH (30 h) b) 2 WLH (30 h)	Self-study a) 60 h b) 60 h	Frequency a) each winter b) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Torsten Wichtmann a) Dr.-Ing. Meisam Goudarzy b) Dr.-Ing. Felipe Prada					
Admission requirements					
Learning outcome, core skills After successfully completing the modules, the students are able to • understand soil dynamic problems and describe them mathematically, • design and evaluate laboratory or field testing programs to determine dynamic soil properties, • estimate dynamic soil properties by means of empirical approaches, • design foundations subjected to dynamic loading (e.g. machine foundations), • determine the loading resulting from earthquakes considering the ground conditions, • estimate the risk of soil liquefaction and choose suitable countermeasures, • design geotechnical structures (e.g. foundations, slopes) against earthquake loads.					
Contents a) The lecture deals with the fundamentals of Soil Dynamics: • Fundamentals of vibration theory • Homogeneous systems • Wave propagation in elastic isotropic half space • Laboratory tests on dynamic characteristics of soils • Methods to estimate dynamic characteristics of soils • Dynamic field measurement methods • Design of dynamically loaded foundations • Soil-structure interaction under dynamic loading • High cyclic loading of soils (practical problem: offshore wind turbines) • Laboratory exercise (Resonant column experiment, wave velocity measurements). b) The lecture covers the effects of a seismic event on geotechnical structures and the design of such structures against earthquakes: • Principles of Engineering Seismicity: earthquake description, source characterization, intensity, magnitude and duration parameters, maximum magnitude, concept of response spectra, ground motion prediction (attenuation equations)					

• Deterministic and probabilistic estimation of seismic hazard. Microzoning studies. • Causes of soil liquefaction under seismic loading; methods to estimate the liquefaction risk; countermeasures • Design of slopes against seismic loading • Design of retaining structures against seismic loading • Ground response analysis
Educational form / Language a) Lecture with tutorial / English b) Lecture with tutorial / English
Examination methods • Written exam 'Soil Dynamics and Geotechnical Earthquake Engineering' (180 min., Part of modul grade 100 %) • Homework with bonus points for the exam for both parts of the module.
Requirements for the award of credit points • Passed final written examination
Module applicability • M.Sc. Subsurface Engineering • M.Sc. Civil Engineering
Weight of the mark for the final score Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.
Further Information

Subsurface Energy and Gas Storage Subsurface Energy and Gas Storage					
Module number 138220	Credits 5 CP	Workload 150 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Subsurface Energy and Gas Storage			Contact hours a) 3 WLH (45 h)	Self-study a) 105 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr. rer. nat. Rolf Bracke a) Dr. sc. ETH Zürich Katharina Alms					
Admission requirements Recommended previous knowledge: English language skills.					
Learning outcome, core skills This course is an introduction to underground energy and gas storage technologies, focusing on the geological subsurface and its potential for the storage of heat and/or natural gas, hydrogen and CO ₂ in the context of energy transition and security. Students will be able to differentiate between different storage options and technologies, learn to calculate resource capacities, describe the components and functions of an underground gas storage facility and give an outlook on future developments. The lecture is accompanied by an exercise with practical examples and excursions.					
Contents a) • Introduction to the energy market, security of supply and energy transition; historical background and state of the art of storage technologies focusing on storage processes, capacities and constraints • Seasonal heat storage in aquifers and mines and its integration into the energy infrastructure (with field visit to a storage site) • Natural gas storage in salt caverns, depleted hydrocarbon fields and saline aquifers; Geological requirements and technological components • Carbon capture and storage (with lab visit): CO₂ capture technologies from point sources and direct air capture technologies; CO₂ transport and geological requirements for underground gas storage and mineralization; Example projects • Underground hydrogen storage: Challenges and opportunities in a future energy market; Example projects					
Educational form / Language a) Lecture (2 WLH) / Tutorial (1 WLH) / English					
Examination methods • Written exam 'Subsurface Energy and Gas Storage' (90 min., Part of modul grade 100 %, If the number of participants is smaller than 14 the examination mode can be changed to a presentation.) • Semester-accompanying exercises					
Requirements for the award of credit points Passed final module examination: Written exam Passed semester accompanying exercises					

Module applicability
M.Sc. Mechanical Engineering
M.Sc. Sales Engineering and Product Management
M.Sc. Geosciences
M.Sc. Subsurface Engineering
Weight of the mark for the final score
Percentage of total grade [%] = $5 * 100 * \text{FAK} / \text{DIV}$
FAK: The weighting factors can be taken from the table of contents.
DIV: The values can be taken from the table of contents.

Technologies in Mechanised Tunneling Technologies in Mechanised Tunneling					
Module number BI-W51/SE-O-3	Credits 2 CP	Workload 60 h	Semester[s] 2. Sem.	Duration 1 Semester[s]	Group size 20
Courses a) Technologies in Mechanised Tunneling (128228)			Contact hours a) 2 WLH (30 h)	Self-study a) 30 h	Frequency a) each summer
Module coordinator and lecturer(s) Prof. Dr.-Ing. Markus Thewes a) Dr.-Ing. Gerhard Wehrmeyer					
Admission requirements Recommended previous knowledge: Bachelor-level knowledge of construction operations and construction process engineering, Bachelor-level knowledge of foundation engineering and soil mechanics					
Learning outcome, core skills The performance-related design and the process engineering layout of a Tunnel Boring Machine (TBM) is an important interface on tunnel construction sites between the disciplines of civil engineering, geotechnics and mechanical engineering. The associated know-how enables the engineer to make a correct selection and dimensioning of individual components of the TBM and thus potentially determines the safety as well as the structural and economic success of a mechanised tunnel advance. It is therefore an indispensable tool for future Tunnel Engineers and Tunnel Project Managers in the field of mechanized tunneling. The students are introduced to the different machine types and details, which vary depending on the specific geotechnical boundary conditions. They will learn how to dimension them, to which details a special attention must be paid, which special solutions exist and in which direction research and development is in this area currently moving.					
Contents a) The lecture deals with the extended basic knowledge of construction process engineering. • Definition of different types of Tunnel Boring Machines and application ranges • Detailed consideration of assembly units • Shield (geometrical correlations, hydraulic forces of thrust jacks, load assumptions and evidence) • Cutting wheel / cutterhead (excavation process, soil excavation, application ranges, wear and change of cutting tools) • Cutterhead Drive (torque, sealing systems, lubrication and monitoring) • Handling of segmental linings and of alternative tunnel lining systems • Conveyor systems (hydraulic transport, screw conveyor, belt conveyor, monitoring of excavation volume) • Backup installations and TBM Logistics • Customized solutions (accessible Cutting Wheel, Variable Density Machines) • Emerging Technologies (Robotics, large Diameter, Diagnosis and Maintenance)					
Educational form / Language a) Lecture (2 WLH) / English					

Examination methods

- Written exam 'Technologies in Mechanised Tunneling' (60 min., Part of modul grade 100 %, optionally English or German)

Requirements for the award of credit points

- Passed Module examination

Module applicability

- MSc Civil Engineering
- MSc Subsurface Engineering
- MSc Geosciences
- MSc Mechanical Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $2 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Further Information

Training of Competences (Part 1) Training of Competences (Part 1)					
Module number CE-W01/SE-O-14/ToC I	Credits 4 CP	Workload 120 h	Semester[s] 1./3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Training of Competences and German Language course			Contact hours a) 4 WLH (60 h)	Self-study a) 60 h	Frequency a) each winter
Module coordinator and lecturer(s) N.N. a) University Language Center (ZFA) of Ruhr-University Bochum					
Admission requirements					
Learning outcome, core skills After successfully completing the module, the students are able to employ at a minimum level all four skills (speaking, listening, reading and writing) in familiar universal contexts or shared knowledge situations such as greeting, small talk, shopping, making appointments, eating out, orientation, biography, healthcare etc.					
Contents a) The learning goals of this German language course fulfill the special requirements of foreign students majoring in a subject that uses English as a teaching language. On a basic level, the main focus of the course lies on action-oriented speaking, listening, reading and writing comprehension so that the students learn to cope with everyday situations of their life in Germany. The classes consist of small groups, ensuring that students have ample opportunities to speak as well as having their individual needs attended to. All of our instructors are university graduates experienced in teaching DaF (Deutsch als Fremdsprache - German as a foreign language) and have been selected for their experience in working with students and their ability to make language learning an active and rewarding process. An optional intensive block course after the winter semester helps to activate and to intensify the newly acquired language skills.					
Educational form / Language a) Lecture with tutorial / English / German					
Examination methods Written exam 'Training of Competences and German Language course' (120 min., Part of modul grade 100 %, and Homework (20 h) / German)					
Requirements for the award of credit points Passed final module examination					
Module applicability - M.Sc. Computational Engineering - M.Sc. Subsurface engineering - Special offer for foreign students of the course					
Weight of the mark for the final score					

Percentage of total grade [%] = $4 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Training of Competences (Part 2) Training of Competences (Part 2)					
Module number CE-W02/SE-O-15/ToC II	Credits 4 CP	Workload 120 h	Semester[s] 2./4. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Training of Competences (Part 2)			Contact hours a) 4 WLH (60 h)	Self-study a) 60 h	Frequency a) each summer
Module coordinator and lecturer(s) N.N. a) University Language Center (ZFA) of Ruhr-University Bochum					
Admission requirements Participation on CE-W01/SE-O14/ToC I is obligatory					
Learning outcome, core skills After successfully completing the module, the students are able to employ at an intermediate level all four skills (speaking, listening, reading and writing) in familiar universal contexts or shared knowledge situations such as greeting, small talk, shopping, making appointments, eating out, orientation, biography, healthcare etc.					
Contents a) The learning goals of this German language course fulfill the special requirements of foreign students majoring in a subject that uses English as a teaching language. The main focus of the course lies on intermediate level action-oriented speaking, listening, reading and writing comprehension so that the students learn to cope with everyday situations of their life in Germany. This course continues the learning goals of the module Training of Competences 1.					
Educational form / Language a) Lecture (4 WLH) / English / German					
Examination methods Written exam 'Training of Competences (Part 2)' (120 min., Part of modul grade 100 %)					
Requirements for the award of credit points Passed final module examination					
Module applicability - M.Sc. Computational Engineering - M.Sc. Subsurface engineering - Special offer for foreign students of the course					
Weight of the mark for the final score Percentage of total grade [%] = $4 * 100 * \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.

Uncertainty Quantification in FE Analyses with Surrogate Modeling					
Uncertainty Quantification in FE Analyses with Surrogate Modeling					
Module number BI-WP58/CE-WP29/SE-O-17	Credits 6 CP	Workload 180 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Uncertainty Quantification (127519) b) Surrogate Modeling (127519)			Contact hours a) 2 WLH (30 h) b) 2 WLH (30 h)	Self-study a) 60 h b) 60 h	Frequency a) each winter b) each winter
Module coordinator and lecturer(s) Prof. Dr. Roger A. Sauer a) Dr.-Ing. Gerrit E. Neu b) Dr.-Ing. Ba Trung Cao					
Admission requirements Recommended previous knowledge: Fundamental knowledge in structural analysis, Finite Element Method, probability theory, and basic programming (MATLAB, Python)					
Learning outcome, core skills The course equips students with theoretical foundations and practical skills to model, propagate, and mitigate uncertainties in structural analysis. Students will be able to define an uncertainty quantification problem, evaluate the effect of aleatory, epistemic as well as polymorphic uncertainty onto computational models and to interpret the results. It delves into surrogate modeling methods that approximate high-fidelity simulations, enabling efficient uncertainty assessment in complex systems. Applications to structural reliability, optimization, and risk-informed decision-making are emphasized, with hands-on experience using state-of-the-art computational tools. After successfully completing the modules, the students are able to • Understand the role and significance of uncertainty in structural engineering and computational models. • Apply probabilistic and non-probabilistic methods for modeling uncertain parameters. • Develop and implement surrogate models for efficient uncertainty propagation and sensitivity analysis. • Use state-of-the-art tools and frameworks to solve real-world problems involving uncertain data.					
Contents a) The course deals with the uncertain data involving in structural analysis: • Fundamentals of uncertainty quantification: types and sources of uncertainty (aleatory vs. epistemic) • Sources of uncertainty in structural engineering: material properties, geometry, boundary conditions, and external loads • Computing with uncertainty models: stochastic model, interval analysis, fuzzy logic, and polymorphic model • Evaluation of model responses due to uncertain inputs: Quantification by statistical measures, sensitivity analysis and structural reliability b)					

The course deals with the development of numerical surrogate models to accelerate the computation with uncertain data:

- Surrogate models based on black-box machine learning techniques (Artificial Neural Network)
- Surrogate models based on reduced order methods (Proper Orthogonal Decomposition)
- Surrogate models based on hybrid combination (Physics-informed machine learning)
- Comparison of surrogate modelling techniques: accuracy vs. computational efficiency

Educational form / Language

a) Lecture (2 WLH) / English

b) Lecture (2 WLH) / English

Examination methods

- Term paper 'Uncertainty Quantification in FE Analyses with Surrogate Modeling' (90 h., Part of modul grade 100 %, Final project assignment + presentation of the results is used to determine the final grade Deadline will be announced at the beginning of the semester.)

Requirements for the award of credit points

- Passed final module examination

Module applicability

- M.Sc. Civil Engineering
- M.Sc. Subsurface Engineering
- M.Sc. Computational Engineering

Weight of the mark for the final score

Percentage of total grade [%] = $6 * 100 * \text{FAK} / \text{DIV}$

FAK: The weighting factors can be taken from the table of contents.

DIV: The values can be taken from the table of contents.

Variational Calculus and Tensor Analysis Variational Calculus and Tensor Analysis					
Module number CE-WP01/SE-O-6/VCTA	Credits 5 CP	Workload 150 h	Semester[s] 3. Sem.	Duration 1 Semester[s]	Group size no limitation
Courses a) Variational Calculus and Tensor Analysis (125505)			Contact hours a) 3 WLH (45 h)	Self-study a) 105 h	Frequency a) each winter
Module coordinator and lecturer(s) Prof. Dr.-Ing. Johanna Waimann a) Prof. Dr.-Ing. Johanna Waimann, Dr.-Ing. Ulrich Hoppe					
Admission requirements Recommended previous knowledge: Mathematics					
Learning outcome, core skills After successfully completing the module, the students will be able • to read, write and interpret tensor expression in index and abstract notation, • to know and apply tools for formulating and manipulating the equations of continuum mechanics, • to understand and solve variational problems in mechanics.					
Contents a) • Tensor Analysis: Vector and tensor notation, vector and tensor algebra, dual bases, coordinates in Euclidean space, differential calculus, scalar invariants and spectral analysis, isotropic functions • Variational Calculus: First variation, boundary conditions, PDEs: weak and strong form, constrained minimization problems, Lagrange multipliers, applications to continuum mechanics					
Educational form / Language a) Lecture (2 WLH) / Tutorial (1 WLH) / English					
Examination methods • Written exam 'Variational Calculus and Tensor Analysis' (90 min., Part of modul grade 100 %, or Oral Examination (30 Min). Examination Methods will be defined at the beginning of the Semester due to the number of participants)					
Requirements for the award of credit points • Passed final written examination					
Module applicability • M.Sc Computational Engineering • M.Sc Subsurface Engineering					
Weight of the mark for the final score Percentage of total grade [%] = $5 \cdot 100 \cdot \text{FAK} / \text{DIV}$ FAK: The weighting factors can be taken from the table of contents. DIV: The values can be taken from the table of contents.
